Cette sélection de 1000 nus est un périple à travers le musée imaginaire de l'histoire de la photographie de nu, ou un voyage dans le temps, l'oeil rivé au trou de la serrure. Uwe Scheid est considéré comme un expert dans le domaine de la photographie érotiquee à travers les âges, et sa collection, réunie au fil du temps, est l'une des plus vastes et des plus importantes au monde.

The history of nude photography is the history of people's fascination with the topic. This book offers a cross-section of the history of nude photography, ranging from the earliest nude daguerreotypes and ethnographic nude photographs to experimental nude photography.

This book explores the question of realism in motion pictures. Specifically, it explores how understanding the role of realism in the history of title sequences in film can illuminate discussions raised by the advent of digital cinema. Ideologies of the Real in Title Sequences, Motion Graphics and Cinema fills a critical and theoretical void in the existing literature on motion graphics. Developed from careful analysis of André Bazin, Stanley Cavell, and Giles Deleuze's approaches to cinematic realism, this analysis uses title sequences to engage the interface between narrative and non-narrative media to consider cinematic realism in depth through highly detailed close readings of the title sequences for Bullitt (1968), Kolchak: The Night Stalker (1974), The Number 23 (2007), The Kingdom (2008), Blade Runner: 2049 (2017) and the James Bond films. From this critique, author Michael Betancourt develops a modal approach to cinematic realism where ontology is irrelevant to indexicality. His analysis shows the continuity between historical analogue film and contemporary digital motion pictures by developing a framework for rethinking how realism shapes interpretation.

Focusing on non-human actors, Grażyna Gajewska expands the discussion of eroticism in contemporary culture by bringing in material culture, object studies, and "the anthropology of things." She sets out from the assumption that things (such as, for instance, attire, underwear, shoes, or jewelry) play an important role in arousing erotic imagination--they are genuine participants in the process, not mere signifiers of eroticism. Their use does not denote only undeniable facts of everyday life associated with functionality, the pragmatic or aesthetic aspect, but also contribute to the shaping of human emotions, fantasies and phantasms. In her study, Gajewska brings eroticism in contemporary culture to light through applying gender studies to new contexts--animals, robots, virtual worlds--even as she explores a new methodology, the anthropology of things.

Starts with an overview of today's FPGA technology, devices, and tools for designing state-of-the-art DSP systems. A case study in the first chapter is the basis for more than 30 design examples throughout. The following chapters deal with computer arithmetic concepts, theory and the implementation of FIR and IIR filters, multirate digital signal processing systems, DFT and FFT algorithms, and advanced algorithms with high future potential. Each chapter contains exercises. The VERILOG source code and a glossary are given in the appendices, while the accompanying CD-ROM contains the examples in VHDL and Verilog code as well as the newest Altera "Baseline" software. This edition has a new chapter on adaptive filters, new sections on division and floating point arithmetics, an up-date to the current Altera software, and some new exercises.
