The Keysight 346A/B/C noise source produces noise output (power-
on) when +28 V is applied. When it is off, there is residual noise
due to thermal agitation in the noise source (power-off). These two
noise levels are used to measure the gain and added noise of the

The low SWR of the noise source reduces a major source of measurement uncertainty; reflections of test signals. The 346B's high ENR, low SWR, and variety of connectors make it a general-purpose noise source. Add special option H01 for high ENR (21 dB typical) to measure high noise figure devices, or option H42 for measuring Direct Broadcast Satellite (DBS) low noise block converters.
