Q&A with A Guide to the Automation Body of Knowledge- ISA

ATP that is used within the body can be closely compared to the power that is necessary to for an automated system to function within a factory. Similar to that of energy within the human body, power goes through various stages where it is converted or changed before it is able to be used by the components in an automated system.

Automation and the Body: Energy vs. Power — Advanced ...

Home automation (also called *domotics*) designates an emerging practice of increased automation of household appliances and features in residential dwellings, particularly through electronic means that allow for things impracticable, overly expensive or simply not possible in recent past decades. The rise in the usage of home automation solutions has taken a turn reflecting the increased dependency of people on such automation solutions.
