In A Tour of C++, Second Edition, Bjarne Stroustrup, the creator of C++, describes what constitutes modern C++. This concise, self-contained guide covers most major language features and the major standard-library components—not, of course, in great depth, but to a level that gives programmers a meaningful overview of the language, some key examples, and practical help in getting started.

*[PDF] [EPUB] A Tour of C++ Download*

The C++11 standard allows programmers to express ideas more clearly, simply, and directly, and to write faster, more efficient code. Bjarne Stroustrup, the designer and original implementer of C++, thoroughly covers the details of this language and its use in his definitive reference, The C++ Programming Language, Fourth Edition. In A Tour of C++ , Stroustrup excerpts the overview chapters ...

*A Tour of C++ - Bjarne Stroustrup - Google Books*

Available as eBook and on paper from the publisher. The ``tour" is a quick (about 180 pages) tutorial overview of all of standard C++ (language and standard library) at a moderately high level for people who already know C++ or at least are experienced programmers. Available here: The Preface. Table of Contents.

*Stroustrup: A Tour of C++*

All C++ compiler purveyors are hard at work completing their C++11 support. The "Tour" is a tour of ISO Standard C++, rather than a tour of what's new in C++11 or a tour of your favorite C++ implementation. Also, the tour assumes some familiarity with programming; it is not written for complete novices. Constructive feedback is most welcome.

*Tour : Standard C++*

Experience the beauty of Washington, D.C. at night on this monuments at night bike tour of the city. Check out the Jefferson, Lincoln and WWII memorials once the sun goes down and explore the Vietnam War Memorial and the National Mall at night.

The C++11 standard allows programmers to express ideas more clearly, simply, and directly, and to write faster, more efficient code. Bjarne Stroustrup, the designer and original implementer of C++, thoroughly covers the details of this language and its use in his definitive reference, *The C++ Programming Language, Fourth Edition*. In *A Tour of C++*, Stroustrup excerpts the overview chapters from that complete reference, expanding and enhancing them to give an experienced programmer—in just a few hours—a clear idea of what constitutes modern C++. In this concise, self-contained guide, Stroustrup covers most major language features and the major standard-library components—not, of course, in great depth, but to a level that gives programmers a meaningful overview of the language, some key examples, and practical help in getting started. Stroustrup presents the C++ features in the context of the programming styles they support, such as object-oriented and generic programming. His tour is remarkably comprehensive. Coverage begins with the basics, then ranges widely through more advanced topics, including many that are new in C++11, such as move semantics, uniform initialization, lambda expressions, improved containers, random numbers, and concurrency. The tour ends with a discussion of the design and evolution of C++ and the extensions added for C++11. This guide does not aim to teach you how to program (see Stroustrup's *Programming: Principles and Practice Using C++* for that); nor will it be the only resource you'll need for C++ mastery (see Stroustrup's *The C++ Programming Language, Fourth Edition*, for that). If, however, you are a C or C++ programmer wanting greater familiarity with the current C++ language, or a programmer versed in another language wishing to gain an accurate picture of the nature and benefits of modern C++, you can't find a shorter or simpler introduction than this tour provides.

Extended and enhanced version of: *The C++ programming language, Fourth edition.*

Alexis de Tocqueville and Gustave de Beaumont's travels in America in 1831-32 have been retold by C-SPAN. For nine months, the cable TV network retraced the Frenchmen's journey, featuring programming from cities along the route. Now the Tocqueville rediscovery continues with the publication of this unique guide-book. Comprising 47 brief chapters covering cities and small towns that Tocqueville visited, the book allows readers to hear Tocqueville's words while following in his footsteps. Chapters include descriptions of cities and towns, excerpts of what Tocqueville wrote about them, accounts of what Tocqueville and Beaumont did there and details about sights that can be seen today. The book provides telephone numbers and addresses of visitors bureaus, general directions and comparisons of the towns as they are today with what they were like in Tocqueville's era. *Traveling Tocqueville's America* is the perfect companion for armchair traveler and tourist alike.

Prepare to learn everything we still don't know about our strange and mysterious universe Humanity's understanding of the physical world is full of gaps. Not tiny little gaps you can safely ignore —there are huge yawning voids in our basic notions of how the world works. PHD Comics creator Jorge Cham and particle physicist Daniel Whiteson have teamed up to explore everything we don't know about the universe: the enormous holes in our knowledge of the cosmos. Armed with their popular infographics, cartoons, and unusually entertaining and lucid explanations of science, they give us the best answers currently available for a lot of questions that are still perplexing scientists, including: \* Why does the universe have a speed limit? \* Why aren't we all made of antimatter? \* What (or who) is attacking Earth with tiny, superfast particles? \* What is dark matter, and why does it keep ignoring us? It turns out the universe is full of weird things that don't make any sense. But Cham and Whiteson make a compelling case that the questions we can't answer are as interesting as the ones we can. This fully illustrated introduction to the biggest mysteries in physics also helpfully demystifies many complicated things we do know about, from quarks and neutrinos to gravitational waves and exploding black holes. With equal doses of humor and delight, Cham and Whiteson invite us to see the universe as a possibly boundless expanse of uncharted territory that's still ours to explore.

Whatever the desire of your heart—better schools, better neighborhoods, more positive workplaces, more connected families, or more engaged communities—Change Your World will guide you through the entire process to take action and start making an impact today right where you are. You can bring about positive, lasting change in the world, and you don't have to be rich and famous or lead a big organization to do it. Global leadership and development icons John C. Maxwell and Rob Hoskins provide the inspiring and practical roadmap to get started being the change you want to see—in your community and beyond. For many of us, the world we live in feels broken, yet change is easier than we think. Learn from the firsthand experiences shared by the authors from their work helping to transform communities, businesses, and millions of lives around the world. In Change Your World, they show you how to Identify your cause Live out the values that make a difference Become a catalyst for change Join the right team or recruit one of your own Work together with others to make a difference Measure your impact and keep improving You'll not only be encouraged to make a difference based on the needs you see around you; you'll be equipped to take action and start making an impact today.

Two young Regency ladies with special powers must save the monarchy: “A satisfying blend of magic, mystery, humor, and romance” (Booklist). Ocean voyages do not agree with wizards, and seasickness during the Channel crossing is the price Cecelia must pay for her budding magical skill. As her nausea ebbs, she is comforted by her new husband, James, and the knowledge that at long last they are on their honeymoon. In their company is Cecelia's cousin Kate, newly minted as the Marchioness of Schofield, and her husband, Thomas. The shared journey guarantees the two couples a happy start to married life, if they can survive the perils of the Continent. In Calais, a mysterious woman visits Cecelia with a package intended for Thomas's mother. Inside is an alabaster flask of noble manufacture, one of the royal artifacts that have been vanishing all over Europe as part of a magical plot against the French crown. This is no simple honeymoon: On their tour of Europe, Kate and Cecelia must save the monarchy from an emperor-in-exile named Napoleon. This ebook features illustrated biographies of Patricia C. Wrede and Caroline Stevermer including rare photos and never-before-seen documents from the authors' personal collections.

“Thoroughly enjoyable” essays from a cognitive neuroscientist, filled with surprising facts (Kirkus Reviews, starred review). Modern computers might be faster, and whales might have larger brains, but neither can match the sheer intellect or capacity for creativity that the human mind enjoys. It is arguably the most complex organ in the universe. If you've ever wondered why your dog can remember where it buried its bone but you can't find your keys, or whether it's true that we use only ten percent of our brainpower, this concise book offers some answers—and introduces us to what science has learned about the intricacies of the human brain over the last fifty years. Leading us through behavioral experiments and neuroscience, cognitive theory and Darwinian evolution, Michael Corballis punctures a few hot-air balloons, and explains just what we know—and don't know—about our own minds. “Poses questions we wouldn't have thought to ask and then answers them with clarity and wit.” —American Scientist

Bjarne Stroustrup's own C++ In-Depth Series is now available all together in one attractive gift box, at a special reduced price! All books in this series have been hand-picked by Bjarne Stroustrup, the creator of the C++ programming language, as being worthy additions to the C++ literature. They give programmers concise, focused guides to specific topics. The series' practical approach is designed to lift professionals to the next level in their programming skills. They are all written by acknowledged experts. The books included are: Modern C++ Design, by Andrei Alexandrescu Accelerated C++, by Andrew Koenig and Barbara Moo Essential C++, by Stan Lippman Exceptional C++, by Herb Sutter More Exceptional C++, by Herb Sutter These are five great books of use to all C++ programmers. They are gathered into one handsome and sturdy gift box, and they are specially priced at over \$30 off the cost of buying them individually. The C++ In-Depth Box Set will be a welcome gift for any C++ programmer. 0201775816B12112002
