Wiper Control Kits Use your 12-volt wiper motor and a wiper control kit to rig decorations and props so they move at intervals. For example, connect ghostly figures to strings attached to the motor gear lever to create Halloween spooks. Choose a control kit with all parts needed to make a control board or buy a kit already assembled.~~

~~What to Use to Control the Variable for a 12V Wiper Motor—
The cycle automatically repeats until the wipers are turned off. This mode is activated by shorting terminals 4 & 5 and can be connected to a toggle switch or permanently wired closed if you only wish to use this mode. Cycling On-Off: wipers sweep continuously for the user-set time then park and turn off for the same time. The cycle automatically repeats until the wipers are turned off.~~

Activation of the solenoid switches the control valve 20 to the alternate position from the position illustrated in FIG. 1 and ports compressed air to the other end 44 of the air wiper motor piston. As sensor vane 76 moves away from the sensor 70, a logical low is established at the control module signal input 96.~~

~~Pneumatic windshield wiper with sensor controlled motor—
Vacuum windshield wipers were operated by a vacuum wiper motor installed along the edge of the roof or placed below the windshield. The vacuum wiper motor was powered by means of a manifold vacuum. In a typical internal combustion engine, the manifold vacuum is created by the air pressure difference between the outside atmosphere and the pressure in the intake manifold of the engine.~~
