Exposure to great temperatures like explosions or fire causes these aliens to increase size tremendously. Their origin is unknown. They arrive on Earth as blue-colored unicellular lifeforms inside a meteorite and soon some of them evolve to become multicellular, eventually spawning an entire ecosystem within the meteor's crater, which includes species analogous to lichens, worms and insects.

Abstract. We review the state of the art of alien plant research with emphasis on conceptual advances and knowledge gains on general patterns and drivers, biotic interactions, and evolution. Major advances include the identification of different invasion stages and invasiveness dimensions (geographic range, habitat specificity, local abundance) and the identification of appropriate comparators while accounting for propagule pressure and year of introduction.
