number of types of irregular heartbeats. This includes ventricular tachycardia, ventricular fibrillation, and wide complex tachycardia, as well as atrial fibrillation and paroxysmal supraventricular tachycardia. Evidence in cardiac arrest, however, is poor. It can be given by mouth, intravenously, or intraosseously. When used by mouth, it can take a few weeks for effects to begin. Common side effects include feeling tired, tr

Amiodarone - Wikipedia

Amiodarone is used to help the heart beat more regularly controlling an irregular or rapid heart rate. This reduces palpitations, dizziness and blackouts which can occur if the heart beats too fast. Amiodarone acts on the heart cells and regulates the heartbeat by affecting the rate electrical impulses pass through the heart.
