Reliability and Risk Analysis. The necessity of expertise for tackling the complicated and multidisciplinary issues of safety and risk has slowly permeated into all engineering applications so that risk analysis and management has gained a relevant role, both as a tool in support of plant design and as an indispensable means for emergency planning in accidental situations.

Introduction to reliability (Portsmouth Business School, April 2012) 12. = $0.067 \times 0.075 = 0.005025$. For the OR gate we add the probabilities to get the probability of the top event: Prob (Loss of electric power) = Prob (Loss of a.c. power) + Prob (Loss of d..c power) = $0.005025 + 0.005 = 0.010025$.
