electromagnetic waves as the channel. The antennas of different specifications can be used for these purposes. The sizes of these antennas depend upon the bandwidth and frequency of the signal to be transmitted.

Antenna Theory - Types of Propagation -
TutorialsPoint

Access Free Antennas And Radio Propagation

One of the key areas of any radio system is that part where the signal is transferred from the transmitter to the receiver. This involves the use of antennas or aerials to radiate the signal as an electromagnetic wave, and then there is the way that the electromagnetic wave travels or propagates between the transmitting antenna and the receiving one.
