Por primera vez en 20 años, el Estado Mundial de la Infancia de UNICEF examina la cuestión de los niños, los alimentos y la nutrición, aportando una nueva perspectiva sobre un problema que evoluciona rápidamente. A pesar de los progresos realizados en las dos últimas décadas, una tercera parte de los niños menores de 5 años están malnutridos (con retraso en el crecimiento, emaciación o sobrepeso), mientras que dos terceras partes corren el riesgo de padecer emaciación y hambre oculta a causa de la deficiente calidad de su alimentación. Estos patrones reflejan una profunda triple carga de malnutrición -desnutrición (retraso en el crecimiento y emaciación), hambre oculta y sobrepeso - que amenaza la supervivencia, el crecimiento y el desarrollo de los niños y de los países. En el núcleo de este desafío se encuentra un sistema alimentario deficiente que no proporciona a los niños los alimentos que necesitan para crecer sanos. Este informe ofrece datos y análisis exclusivos sobre la malnutrición en el siglo XXI y ofrece recomendaciones para situar los derechos de la infancia en el centro de los sistemas alimentarios.
