Accordingly, plants are adapted to grow under different light intensities. Plants that grow under high light intensities with a higher rate of photosynthesis are referred to as plants grown in light while plants that grow under low light intensities or dark conditions with a lower rate of photosynthesis are referred to as plants grown in the dark. This is the key difference between plants grown in light and

dark.

Difference Between Plants Grown in Light and Dark ...

Is there any difference between the dark and light soy sauce? Let us find out. Light Soy Sauce. Light soy sauce, as the name implies, is light in color and is also the thinner of the two sauces. It is mainly used to flavor a dish. The light color is because of addition of wheat during the fermentation process of the soybeans.
