A lyrical and haunting depiction of American racial violence and lynching, evoked through stunning full-color artwork In late May 1918 in Valdosta, Georgia, ten Black men and one Black woman—Mary Turner, eight months pregnant at the time—were lynched and tortured by mobs of white citizens. Through hauntingly detailed full-color artwork and collage, *Elegy for Mary Turner* names those who were killed, identifies the killers, and evokes a landscape in which the NAACP investigated the crimes when the state would not and a time when white citizens baked pies and flocked to see Black corpses while Black people fought to make their lives—and their mourning—matter. Included are contributions from C. Tyrone Forehand, great-grandnephew of Mary and Hayes Turner, whose family has long campaigned for the deaths to be remembered; abolitionist activist and educator Mariame Kaba, reflecting on the violence visited on Black women's bodies; and historian Julie Buckner Armstrong, who opens a window onto the broader scale of lynching's terror in American history.

Deborah Y. Liggan suffered her first bipolar depressive episode fourteen years ago. It came without warning, and the medication she was prescribed was useless. Only after attempting suicide did she receive electroconvulsive therapy, sometimes called shock therapy. She suffered several more bipolar episodes over the next ten years, but each time she was prepared. She knew what worked for her, and so she wasted no time in getting ECT treatments. Between psychotic episodes, she earned a medical degree. In *ECT for the Elderly*, she explores how ECT has changed over the years so elderly patients considering it will know what to expect. The textbook is also a resource for students, medical practitioners, and mental health workers who want to identify and prepare elderly patients for treatment. Before even thinking about using ECT, she urges all professionals to ask questions such as the following: Does the patient have an ECT-responsiveness illness? Does the patient have any medical problems that might require modifications of technique or increase the risks of the procedure? Has appropriate informed consent been obtained? Find out how ECT is being used to help the elderly with this textbook written by a doctor who has been treated with the therapy herself.

HELPS YOU DEVELOP AND ASSESS PEDIGREES TO MAKE DIAGNOSES, EVALUATE RISK, AND COUNSEL PATIENTS The Second Edition of *The Practical Guide to the Genetic Family History* not only shows how to take a medical-family history and record a pedigree, but also explains why each bit of information gathered is important. It provides essential support in diagnosing conditions with a genetic component. Moreover, it aids in recommending genetic testing, referring patients for genetic counseling, determining patterns of inheritance, calculating risk of disease, making decisions for medical management and surveillance, and informing and educating patients. Based on the author's twenty-five years as a genetic counselor, the book also helps readers deal with the psychological, social, cultural, and ethical problems that arise

in gathering a medical-family history and sharing findings with patients. Featuring a new Foreword by Arno Motulsky, widely recognized as the founder of medical genetics, and completely updated to reflect the most recent findings in genetic medicine, this Second Edition presents the latest information and methods for preparing and assessing a pedigree, including:

- Value and utility of a thorough medical-family history
- Directed questions to ask when developing a medical-family history for specific disease conditions
- Use of pedigrees to identify individuals with an increased susceptibility to cancer
- Verification of family medical information
- Special considerations when adoptions or gamete donors are involved
- Ethical issues that may arise in recording a pedigree

Throughout the book, clinical examples based on hypothetical families illustrate key concepts, helping readers understand how real issues present themselves and how they can be resolved. This book will enable all healthcare providers, including physicians, nurses, medical social workers, and physician assistants, as well as genetic counselors, to take full advantage of the pedigree as a primary tool for making a genetic risk assessment and providing counseling for patients and their families.

After a significant loss, grief is normal and necessary. But sometimes a mourner's grief becomes naturally heightened, stuck, or made more complex by especially difficult circumstances, such as suicide, homicide, or multiple losses within a short time period. This is called "complicated grief." In this primer by one of the world's most respected grief educators, Dr. Wolfelt helps caregivers understand the various factors that often contribute to complicated grief. He presents a model for identifying complicated grief symptoms and, through real-life examples, offers guidance for companioning mourners through their challenging grief journeys. This book rounds out Dr. Wolfelt's resources on the companioning philosophy of grief care, making it an essential addition to your professional library.

The exocrine pancreatic function can be impaired by many different pancreatic disease as well as diseases that do not appear to be directly linked to the exocrine pancreas. Hormones stimulating exocrine function (e.g. CCK) might be reduced in diseases affecting the intestinal mucosa (IBD, celiac disease, AIDS) resulting in decreased exocrine secretion. The function of digestive enzymes might be affected by post-cibal asynchrony or by a decreased intraduodenal pH as in Zollinger-Ellison syndrome (ZE). An atrophy of pancreatic tissue might be caused by a lack of trophic factors, as may occur in IDDM, and pancreatic damage might occur due to drugs used for the treatment of other diseases. While some of these conditions appear to be rather rare and of minor clinical relevance, exocrine pancreatic involvement is very frequent in patients with diabetes mellitus. The diagnosis of the condition can be made by the exploration of the exocrine pancreatic secretion, which has been mainly used for the diagnosis of chronic pancreatitis and detection of pancreatic exocrine insufficiency of any etiology.

Thus, diagnosis of the disease is classically based on the demonstration of either the morphological and/or the functional changes that typically develop over time in the course of the disease. Exocrine pancreatic function impairs progressively as chronic pancreatitis develops. Thus, exocrine pancreatic dysfunction refers to a mild, moderate or severe reduction of the exocrine pancreatic secretion. Finally, pancreatic function becomes insufficient to maintain a normal digestive process. Pancreatic exocrine insufficiency refers to the stage of maldigestion and malabsorption of nutrients as a consequence of a primarily and/or secondarily impaired exocrine pancreatic function. Pancreatic enzymes remain as the cornerstone for the effective treatment of various disease pathologies resulting in pancreatic exocrine insufficiency. The rigid criteria set forth by the FDA in the USA will ensure that effective pancreatic enzyme preparations will be available and allow the clinician to successfully treat maldigestion, malabsorption, vitamin deficiencies, protein-calorie malnutrition, and in selected patients, the abdominal pain associated with chronic pancreatitis and PEI. Pancreatic enzymes are particularly underused in chronic pancreatitis patients with PEI, post-gastric and intestinal surgery patients who develop an asynchrony of enzyme delivery to the intestine, and pancreatic cancer patients. Earlier use of potent pancreatic enzymes will enhance the quality of life for these patients. This clinical update has been designed to update the readers on the important aspects of the pancreatic exocrine insufficiency, resulting from different conditions and its impact on the patient. The book has stressed upon the various aspects of the condition like its etiology, diagnosis, evaluation, and management approach to the patient. Overall, the book presents to the readers an excellent compilation of clinically applicable literature sourced from the most acclaimed physicians across globe.

Cancer Nursing: Principles and Practice, Eighth Edition continues as the gold standard in oncology nursing. With contributions from the foremost experts in the field, it has remained the definitive reference on the rapidly changing science and practice of oncology nursing for more than 25 years. Completely updated and revised to reflect the latest research and developments in the care of patients with cancer, the Eighth Edition includes new chapters on the biology of cancer, sleep disorders, and palliative care across the cancer continuum. The Eighth Edition also includes significant updates to the basic science chapters to reflect recent increases in scientific knowledge, especially relating to genes and cancer. Also heavily revised are the sections devoted to the dynamics of cancer prevention, detection, and diagnosis, as well as treatment, oncologic emergencies, end of life care, and professional and legal issues for oncology nurses.

Newborn babies are usually fed via the breast which ensures optimal development and emotional mother-child bonding. However, in some circumstances breast feeding may be either inadequate or impractical.

Historically, deficiencies in the provision of breast milk were addressed by wet-nurse feeding but this was superseded by the introduction of artificial milk feeds, i.e. formula or bottle feeds. This handbook covers formula feeds in the most comprehensive way. Each contribution starts with convenient summary points. Six parts give information about historical and international aspects (South American, African and Chinese perspectives), composition, microbiological and chemical contaminants, allergy and immunology, effects on physical development and metabolic responses, and effects on psychological and neurodevelopment. The 'Handbook of dietary and nutritional aspects of bottle feeding' is essential reading material for nutritionists, dieticians, paediatricians, midwives, pharmacologists, health care professionals, general practitioners and those interested in babies health in general.
