~~Do traditional distinctions between "belief" and "knowledge" still make sense? How are differences between knowledge and belief understood in different cultural contexts? This book explores conflicts between various types of knowledge, especially between orthodox and heterodox knowledge systems, ranging from religious fundamentalism to heresies within the scientific community itself. Beyond addressing many fields in the academy, the book discusses learned individuals interested in the often puzzling spatial and cultural disparities of knowledge and clashes of knowledge.~~

~~George tackles the issues at the heart of the contemporary conflict of worldviews and shows that traditional beliefs may still be the best course of action.~~

~~Interest in relations between knowledge, power, and space has a long tradition in a range of disciplines, but it was reinvigorated in the last two decades through critical engagement with Foucault and Gramsci. This volume focuses on relations between knowledge and power. It shows why space is fundamental in any exercise of power and explains which roles various types of knowledge play in the acquisition, support, and legitimization of power. Topics include the control and manipulation of knowledge through centers of power in historical contexts, the geopolitics of knowledge about world politics, media control in twentieth century, cartography in modern war, the power of words, the changing face of Islamic authority, and the role of Millennialism in the United States. This book offers insights from disciplines such as geography, anthropology, scientific theology, Assyriology, and communication science.~~

~~As we move through our modern world, the phenomenon we call knowledge is always involved. Whether we talk of know-how, technology, innovation, politics or education, it is the concept of knowledge that ties them all together. But despite its ubiquity as a modern trope we seldom encounter knowledge in itself. How is it produced, where does it reside, and who owns it? Is knowledge always beneficial, will we know all there is to know at some point in the future, and does knowledge really equal power? This book pursues an original approach to this concept that seems to define so many aspects of modern societies. It explores the topic from a distinctly sociological perspective, and traces the many ways that knowledge is woven into the very fabric of modern society.~~

~~This volume explores interdependencies between knowledge, action, and space from different interdisciplinary perspectives. Some of the contributors discuss knowledge as a social construct based on collective action, while others look at knowledge as an individual capacity for action. The chapters contain theoretical frameworks as well as experimental outcomes. Readers will gain insight into key questions such as: How does knowledge function as a prerequisite for action? Why are knowledge gaps growing and not diminishing in a knowledge society? How much knowledge is necessary for action? How do various types of knowledge influence the steps from cognition to action? How do different representations of knowledge shape action? What impact have spatial conditions for the formation of knowledge? What is the relationship between social and geographical space? The contributors consider rationality in social and economic theories as well as in everyday life. Attention is also given to action theoretic approaches and rationality from the viewpoints of psychology, post-structuralism, and human geography, making this an attractive book for students, researchers and academics of various backgrounds. This book is open access under a CC BY 4.0 license.~~

~~The broad spectrum of topics surrounding what is termed the 'knowledge economy' has attracted increasing attention from the scientific community in recent years. The nature of knowledge-intensive industries, the spatiality of knowledge, the role of proximity and distance in generating functional knowledge, the transfer of knowledge via networks, and the complex interplay between knowledge, location and economic development are all live academic issues. This book, the fifth volume in Springer's Knowledge and Space series, focuses on the last of these: the multiple relationships between knowledge, the economy, and space. It reflects the conceptual and methodological multidisciplinary emerging from this scholarship, yet where there has up to now been a notable lack of communication between some of the contributing disciplines, resulting in lexical and other confusions, this volume brings concord and to foster interdisciplinarity. These complications have been especially evident in our understanding of the spatiality of knowledge, the part that spatial contexts play in knowledge creation and diffusion, and the relevance of face-to-face contacts, all of which are addressed in these pages. The material here is grouped into four sections—knowledge creation and economy, knowledge and economic development, knowledge and networks, and knowledge and clusters. It assembles new concepts and original empirical research from geography, economics, sociology, international business relations, and management. The book addresses a varied audience interested in the historical and spatial foundations of the knowledge economy and is intended to bridge some of the gaps between the differing approaches to research on knowledge, the economy, and space.~~

~~This collection of essays examines how spatial mobilities of people and practices, technologies and objects, knowledge and ideas have shaped the production, circulation, and transfer of knowledge in different historical and geographical contexts. Targeting an interdisciplinary audience, Mobilities of Knowledge combines detailed empirical analyses with innovative conceptual approaches. The first part scrutinizes knowledge circulation, transfer, and adaption, focussing on the interpersonal communication process, early techniques of papermaking, a geographical text, indigenous knowledge in exploration, the genealogy of spatial analysis, and different disciplinary knowledges about the formation of cities, states, and agriculture. The second part analyses the interplay of mediators, networks, and learning by studying academic careers, travels, and collaborations within the British Empire, public internationalism in Geneva, the global transfer of corporate knowledge through expatriation, graduate mobility from the global south to the global north, and the international mobility of degree programs in higher education.This book is open access under a CC BY 4.0 license.~~

~~The aim of this book is to understand and critically appraise science-based transgression dynamics in their whole complexity. It includes contributions from experts with different disciplinary backgrounds, such as philosophy, history and sociology. Thus, it is in itself an example of boundary transgression.Scientific disciplines and their objects have tended to be seen as permanent and distinct. However, science is better conceived as an activity that constantly surpasses, erases and rebuilds all kinds of boundaries, either disciplinary, socio-ethical or ecological. This transgressive capacity, a characteristic trait of science and its applications, defines us as "knowledge societies." However, scientific and technological developments are also sources of serious environmental and social concerns.~~

~~This book explains why there persists a divergence of academia-industry- government inter-linkage in the Indonesian science system. This divergence constrains the capacity of the science system in localising knowledge from the supply chain linkage. The study shows the centralised character of the Indonesian science system. The Jababeka Industrial Cluster is shaped by the supply chain linkage and, thus, lacks the capacity of a knowledge cluster. The horizontal collaboration between academia-industry is restricted and limited. Farah Purwaningrum is a sociologist with an interdisciplinary background in law. She is currently a lecturer in Sociology at the Institute of Asian Studies, Universiti Brunei Darussalam.~~

~~This book shows, first of all, that leadership plays a crucial role in reinventing regions and branching out from an old path to something new in order to create more balanced and sustainable regional development. Second, it maintains that leadership is not a solo but a multi-agent and -level activity and that it needs to be discussed and studied as such. Third, as the book argues, leadership is shaped differently in various institutional and cultural contexts and on different scales. This book explores the ways leadership plays our in regional development context contributing to economically, socially and ecologically balanced sustainable future.~~
