Essentially, a safety management system for construction is a systematic way of identifying hazards and managing risks relating to the construction workplace. The SMS must include the construction company's policies, procedures, systems, organizational deployment, and accountabilities for making sure that the necessary precautions have been taken and are being maintained for the safety of all concerned.

3 Best Safety Management Systems for Construction

Construction Safety Management Systems and Methods of Safety Performance Measurement: A Review. The construction industry experiences high injury and fatality rates and is far from achieving a zero-injury goal. Thus, effective safety management systems are critical to ongoing efforts to improve safety. An appropriate definition of safety management systems is required, and the elements included in a safety management system should be identified to be used by practitioners to improve safety.

Construction Safety Management Systems and Methods of

Construction and demolition work sites pose unique hazards and risks that can endanger worker safety and health. Occupational safety and health management systems help organizations to continuously identify and eliminate safety and health risks, reduce incident potential, comply with regulations and implement risk-reducing interventions.
