Problem ? Design an algorithm to add two numbers and display the result. Step 1 ? START Step 2 ? declare three integers a, b & c Step 3 ? define values of a & b Step 4 ? add values of a & b Step 5 ? store output of step 4 to c Step 6 ? print c Step 7 ? STOP. Algorithms tell the programmers how to code the program.

A data structure is said to be linear if its elements combine to form any specific order. There are two techniques of representing such linear structure within memory. The first way is to provide the linear relationships among all the elements represented using linear memory location. These linear structures are termed as arrays.
