The digestive system consists of organs that break down food, absorb its nutrients, and expel any remaining waste. Organs of the digestive system are shown in Figure  $\{\text{PageIndex}\{2\}$ . Most of these organs make up the gastrointestinal (GI) tract. Food actually passes through these organs. The rest of the organs of the digestive

material from the body. The digestive system, also known as the gastrointestinal tract, is made up of the mouth, esophagus, stomach, small intestine, large intestine, rectum and the anus.

Parts of the Digestive System and Their Functions ...

# Read PDF Digestive System Part 2 Lower Digestive

These digestive juices break down the food particles in the chyme into glucose, triglycerides, and amino acids. Some chemical digestion of food takes place in the duodenum. Absorption of fatty acids also takes place in the duodenum. The second part of the small intestine is called the jejunum, shown in Figure 3. Here,

# Read PDF Digestive System Part 2 Lower Digestive

hydrolysis of nutrients is continued while most of the carbohydrates and amino acids are absorbed through the intestinal lining.
