Alcoholism is a pathological behavioural syndrome, characterised by comp- sive alcohol use, craving and relapses, even recurring after many years of abstinence. It is suggested that chronic alcohol abuse leads to persistent changes within several neurochemical pathways in the brain and furthermore that an imprinted drug and addiction memory may scarcely be extinguished. Hence, the question arises as to whether there ought to be a reasonable hope that pharmacological drugs will be developed that interfere with an addiction memory, and as a result, finally lead to a cure? In this book, leading preclinical and clinical experts in the field of alcohol relapse prevention strive to furnish an answer to this

question. None of the researchers or clinicians believes in a magic bullet that will be of help to all alcoholic patients in overcoming this disease. However, there is now convincing evidence demonstrating that specific subpopulations of alcoholic patients experience satisfactory benefit from currently available treatments. Today we have two medications for relapse prevention on the market – acamprosate and naltrexone. Although, currently, only a minority of alcoholic patients benefit from these medications, the approval of these compounds may be considered a hallmark in the field of psychopharmacology, even comparable to the era when the first antidepressant compounds were introduced. In recent years we have been witnessing an enormous growth in the science and knowledge regarding the field of relapse prevention.

The Health and Safety at Work Act, together with current and impending EU Directives, obliges those responsible for hazardous areas, those who work in such areas and those who supply equipment for use in such areas to demonstrate that they have taken all necessary and reasonable steps to prevent fires and explosions. This book addresses these issues, seeks to explain the ever increasing complexity of standards and codes pertaining to this field and describes their method of application and the application of other procedures to assist those involved. The only book which provides comprehensive cover of this vital area Written by a leading Internationally recognised UK authority in this field
