The book is a collection of high-quality peer-reviewed research papers presented in the Proceedings of International Conference on Power Electronics and Renewable Energy Systems (ICPERES 2014) held at Rajalakshmi Engineering College, Chennai, India. These research papers provide the latest developments in the broad area of Power Electronics and Renewable Energy. The book discusses wide variety of industrial, engineering and scientific applications of the emerging techniques. It presents invited papers from the inventors/originators of new applications and advanced technologies.

The field of interventional radiology is constantly undergoing change, and its procedures evolve over time. There is currently tremendous pressure on our specialty, as cardiology and vascular surgery

appropriate existing vascular interventions. We need to be looking constantly for new procedures that will replace this loss. In the 1980s, the introduction of vascular access provided new procedures that included the placement of temporary venous catheters, ports, tunneled catheters, and dialysis maintenance. As a result of vascular access the number of procedures performed in some interventional labs doubled. The same revolution is occurring again with the advent of image-guided spine intervention. Five percent of the American population at any one time has back pain. This huge patient population is seeking help for this disabling and persistent problem. Image-Guided Spine Interventions describes the varied and numerous procedures that are available to the image-guided interventionist, who may provide these therapies for the spine. This book embraces clinical evaluation, pharmacological requirements, procedural recommendations, and a spectrum of procedures that will be of interest to the image-guided spine interventionist. It covers a broad range of material that is presented by experts in each field, including discography, intradiscal electrothermal therapy (IDET), percutaneous discectomy, vertebroplasty and ballon kyphoplasty, epidural steroid injections, selective nerve root blocks and autonomic nerve blockade, diagnostic epidurography and therapeutic epidurolysis, sacroiliac and facet joint injections, implanted drug

delivery systems, and epidural blood and fibrin patches for CSF leaks.

Ubiquitous in daily life, electric motors/generators are used in a wide variety of applications, from home appliances to internal combustion engines to hybrid electric cars. They produce electric energy in all electric power plants as generators and motion control that is necessary in all industries to increase productivity, save energy, and reduce

This textbook covers key areas and reviews important principles and steps in the preparation for and the performance of spine biopsy. Image-guided percutaneous biopsy techniques and their application throughout the spinal axis are presented and discussed in detail. The advantages and disadvantages of various spine biopsy instruments are reviewed. Commonly encountered biopsy scenarios are considered in order to help readers effectively manage these situations when they occur in their practices. Clear guidance is offered on patient selection and preparation, which are critical to safe and effective outcomes, and much emphasis is placed on procedural safety, with a focus on complication avoidance and the appropriate reporting of complications. Image-Guided Percutaneous Spine Biopsy will be a welcome one-stop shop providing up-to-date information for all physicians with an

interest in the subject, including radiologists, surgeons, and pathologists.

A concise and up-to-date reference that details the essentials for setting up a modern clinical lab, selecting patients, safely performing the procedure and avoiding pitfalls that are commonly encountered. Over 95 photographs, specially created for this book, provide the reader with detailed examples of how each aspect of the procedure is performed in an understandable step by step format. The authors are world-renowned pioneers in the field who have developed the basic science and clinical information relating to percutaneous vertebroplasty. This rapidly proliferating procedure is used to treat the pain associated with compression fractures of the spine resulting from osteoporotic vertebral collapse or tumor destruction.

This book presents practical development experiences in different areas of data analysis and pattern recognition, focusing on soft computing technologies, clustering and classification algorithms, rough set and fuzzy set theory, evolutionary computations, neural science and neural network systems, image processing, combinatorial pattern matching, social network analysis, audio and video data analysis, data mining in dynamic environments, bioinformatics, hybrid computing, big data analytics and deep

learning. It also provides innovative solutions to the challenges in these areas and discusses recent developments.

This book presents the proceedings of the 4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), held on May 9–10, 2019, at Malaviya National Institute of Technology (MNIT), Jaipur, India. The Internet of Things (IoT) promises to usher in a revolutionary, fully interconnected “smart” world, with relationships between objects and their environment and objects and people becoming more tightly intertwined. The prospect of the Internet of Things as a ubiquitous array of devices bound to the Internet could fundamentally change how people think about what it means to be “online”. The ICIoTCT 2019 conference provided a platform to discuss advances in Internet of Things (IoT) and connected technologies, such as various protocols and standards. It also offered participants the opportunity to interact with experts through keynote talks, paper presentations and discussions, and as such stimulated research. With the recent adoption of a variety of enabling wireless communication technologies, like RFID tags, BLE, ZigBee, embedded sensor and actuator nodes, and various protocols such as CoAP, MQTT and DNS, IoT has moved on from its infancy. Today smart sensors can collaborate directly with machines to automate decision-

making or to control a task without human involvement. Further, smart technologies, including green electronics, green radios, fuzzy neural approaches, and intelligent signal processing techniques play an important role in the development of the wearable healthcare devices.

Percutaneous lumbar discectomy is a new surgical method for treating lumbar disc diseases. The goal of the procedure is decompression of the spinal nerve root by percutaneous removal of the nucleus pulposus under local anesthesia. Probably 20 % of all patients requiring lumbar disc surgery can be successfully treated by this method. During the past two years, percutaneous discectomy has spread rapidly, and it is now performed in most clinical departments engaged in spinal surgery. The first International Symposium on Percutaneous Lumbar Discectomy, held in Berlin in August 1988, covered all current procedures known as "percutaneous discectomy" and the entire range of percutaneous techniques, both clinical and experimental. Its publication is important because of the recency of this new surgical procedure, the outstanding experience of the speakers - including the Japanese, American, and European "pioneers" of the technique - and last but not least the gaps in the knowledge of physicians concerning this topic. This procedure opens up new perspectives in the surgical treatment of

degenerative diseases of the lumbar spine.

Power Quality Enhancement Using Custom Power Devices considers the structure, control and performance of series compensating DVR, the shunt DSTATCOM and the shunt with series UPQC for power quality improvement in electricity distribution. Also addressed are other power electronic devices for improving power quality in Solid State Transfer Switches and Fault Current Limiters. Applications for these technologies as they relate to compensating busses supplied by a weak line and for distributed generation connections in rural networks, are included. In depth treatment of inverters to achieve voltage support, voltage balancing, harmonic suppression and transient suppression in realistic network environments are also covered. New material on the potential for shunt and series compensation which emphasizes the importance of control design has been introduced.
