The book is designed to serve as a textbook for an introductory course in physics for the first year B.E. Students of Anna University,Chennai and RTM Nagpur University,Nagpur.The book is written with the distinctive objectives of providing the students a single source of material as per the syllabi and solid foundaton in physics.Engineering may be broadly called applied physics,which developed itself through application of principles of basic physics.The fundamental discoveries in physics are harnessed by engineering,and in turn,engineering paved way to more discoveries in physics.

For the first year students of B.E./B.Tech/B.Arch. and also useful for competitive Examinations. A number of problems are solved. New problems are included in order to expedite the learning process of students of all hues and to improve their academic performance. Each chapter divided into smaller parts and subheading are provided to make the reading a pleasant journey

A Textbook of Engineering Physics

Basic Theory | Types Of Lasers | Laser Beam Characteristics | Techniues For Control Of Laser Output| Applications Of Lasers

This textbook has been designed to provide necessary foundation in optics which would not only acquaint the student with the subject but would also prepare for an intensive study of advanced topics in optics at a later stage. With an emphasis on concepts, mathematical derivations have been kept at the minimum. This textbook has been primarily written for undergraduate students of B.Sc. Physics and would also be a useful resource for aspirants appearing for competitive examinations.

Engineering Physics is designed to cater to the needs of first year undergraduate engineering students. Written in a lucid style, this book assimilates the best practices of conceptual pedagogy, dealing at length with various topics such as crystallography, principles of quantum mechanics, free electron theory of metals, dielectric and magnetic properties, semiconductors, nanotechnology, etc.
