Drip irrigation is most suitable for row crops (vegetables, soft fruit), tree and vine crops where one or more emitters can be provided for each plant. Generally only high value crops are considered because of the high capital costs of installing a drip system. 6.1.2 Suitable slopes Drip irrigation is adaptable to any farmable slope.

Crop Water Requirements and Irrigation Scheduling

Inline drip irrigation is ideal for all types of retaining walls, including walls with planted pockets, or just planted areas at the top or base of the wall. Its compact form allows irrigation even in the tightest of plant pockets. Inline drip prevents overspray and limits runoff, preventing damage to walls and limiting liability.

Manual irrigation systems are easy to handle, require no technical equipment and are therefore generally cheap (in contrast to high-tech systems such as sprinkler irrigation or subsurface drip irrigation). But they need high labour inputs. A common and very simple technique for manual irrigation is for instance the use of watering cans as it can be found in peri-urban agriculture around large ...
