### First, do no harm - Campaign

While primum non nocere — Latin for “ First, do no harm ” — is commonly associated with the Hippocratic Oath taken by physicians, its actual provenance is uncertain; the phrase likely originated with the English doctor Thomas Sydenham in the 1600s, but didn ’ t appear in writing until 1860. The uncertainty is just as well: core to the idea of primum non nocere is the danger of unintended consequences; sometimes it is better for a doctor to not do anything than to risk causing more harm ...

Even so, in reality, the principle of “ first, do no harm ” may be less helpful — and less practical — than you might think. How practical is “ first, do no harm ” ? Imagine the following situations: Your diagnosis is clear — say, strep throat — and there ’ s an effective treatment available that carries only minor risks.

The contributors to this volume show how healthcare professionals, with the best intentions of providing excellent holistic healthcare, can nonetheless perpetuate violence against vulnerable patients.

At the outset of World War I - the "Great War" - Freud supported the Austro-Hungarian Empire for which his sons fought. But the cruel truths of that bloody conflict, wrought on the psyches as much as the bodies of the soldiers returning from the battlefield, caused him to rethink his stance and subsequently affected his theory: Psychoanalysis, a healing science, could tell us much about both the drive for war and the ways to undo the trauma that war inherently breeds, but its principles could just as easily serve the enemy's desires to inculcate its own brand of "truth." Even a century later, psychoanalysis can still be used as much for the justifications of warfare and propaganda as it is for the defiance of and resistance to those same things. But it is in the investigation of the motives and methods behind these uses that psychoanalysis proves its greatest strength. To wit, this edited collection presents published and unpublished material by analysts, writers, and activists who have worked at the front lines of psychic life and war from various stances. Set at a point of tension and contradiction, they illustrate the paradoxical relation of psychoanalysis as both a site of resistance and healing and a necessary aspect of warmaking, propaganda, and militarism. In doing so, we venture from the home front - from the trauma of returning veterans to the APA's own complicity in CIA "black sites" - across international borders - from the treatment of women in Latin American dictatorships to the resistance to occupation in Palestine, from mind control to an ethics of responsibility. Throughout, a psychoanalytic sensibility deconstructs the very opposition that it inhabits, and seeks to reestablish psychoanalysis as the healing discipline it was conceived to be.

In First Do No Harm, David Gibbs raises basic questions about the humanitarian interventions that have played a key role in U.S. foreign policy for the past twenty years. Using a wide range of sources, including government documents, transcripts of international war crimes trials, and memoirs, Gibbs shows how these interventions often heightened violence and increased human suffering. The book focuses on the 1991-99 breakup of Yugoslavia, which helped forge the idea that the United States and its allies could stage humanitarian interventions that would end ethnic strife. It is widely believed that NATO bombing campaigns in Bosnia and Kosovo played a vital role in stopping Serb-directed aggression, and thus resolving the conflict. Gibbs challenges this view, offering an extended critique of Samantha Power's Pulitzer Prize-winning book, *A Problem from Hell: America in the Age of Genocide*. He shows that intervention contributed to the initial breakup of Yugoslavia, and then helped spread the violence and destruction. Gibbs also explains how the motives for U.S. intervention were rooted in its struggle for continued hegemony in Europe. First Do No Harm argues for a new, noninterventionist model for U.S. foreign policy, one that deploys nonmilitary methods for addressing ethnic violence.

“ Crammed with provocative insights, raw emotion, and heartbreaking dilemmas, ” (The New York Times) First, Do No Harm is a powerful examination of how life and death decisions are made at a major metropolitan hospital in Houston, as told through the stories of doctors, patients, families, and hospital administrators facing unthinkable choices. What is life worth? And when is a life worth living? Journalist Lisa Belkin examines how these questions are asked and answered over one dramatic summer at Hermann Hospital in Houston, Texas. In an account that is fascinating, revealing, and almost novelistic in its immediacy, Belkin takes us inside a major hospital and introduces us to the people who must make life and death decisions every day. As we walk through the hallways of the hospital we meet a young pediatrician who must decide whether to perform a risky last-ditch surgery on a teenager who has spent most of his fifteen years in a hospital; we watch as new parents battle with doctors over whether to disconnect their fragile, premature twins from the machine that keeps them breathing; we are in the operating room as a poor immigrant, paralyzed from a gunshot in the neck, is asked by doctors whether or not he wishes to stay alive; we witness the worry of a kidney specialist as he decides whether or not to transfer an uninsured baby to the county hospital down the road. We experience

critical moments in the lives of these real people as Belkin explores challenging issues and questions involving medical ethics, human suffering, modern technology, legal liability, and financial reality. As medical technology advances, the choices grow more complicated. How far should we go to save a life? Who decides? And who pays?

How does it feel to hold someone's life in your hands, to cut into the stuff that creates thought, feeling, and reason? How do you live with the consequences of performing a potentially lifesaving operation when it all goes wrong? In neurosurgery, more than in any other branch of medicine, the doctor's oath to "do no harm" holds a bitter irony. Operations on the brain carry grave risks. Every day, leading neurosurgeon Henry Marsh must make agonizing decisions, often in the face of great urgency and uncertainty. If you believe that brain surgery is a precise and exquisite craft, practiced by calm and detached doctors, this gripping, brutally honest account will make you think again. With astonishing compassion and candor, Marsh reveals the fierce joy of operating, the profoundly moving triumphs, the harrowing disasters, the haunting regrets, and the moments of black humor that characterize a brain surgeon's life. Do No Harm provides unforgettable insight into the countless human dramas that take place in a busy modern hospital. Above all, it is a lesson in the need for hope when faced with life's most difficult decisions.
