functions. In Book 1 (The Taxobook: History, Theories, and Concepts of Knowledge Organization), the author introduces the very foundations of classification, starting with the ancient Greek philosophers Plato and Aristotle, as well as Theophrastus and the Roman Pliny the Elder. They were first in a line of distinguished thinkers and philosophers to ponder the organization of the world around them and attempt to apply a structure or framework to that world. The author continues by discussing the works and theories of several other philosophers from Medieval and Renaissance times, including

In the 17th, 18th, and 19th centuries, John Locke, Immanuel Kant, James Frederick Ferrier, Charles Ammi Cutter, and Melvil Dewey contributed greatly to the theories of classification systems and knowledge organization. Cutter and Dewey, especially, created systems that are still in use today. Chapter 8 covers the contributions of Shiyali Ramamrita Ranganathan, who is considered by many to be the “father of modern library science.” He created the concept of faceted vocabularies, which are

He moves in a world which takes him from the Australian wilderness to the conference rooms of Vienna and Geneva; from the whore-house to warzone he feels the pull of the genetic spiral of his ancestry.
