The A-904 and A-727, debuting in 1960 and 1962, respectively, are 3-speed automatic Chrysler TorqueFlite Transmissions. In Mopar circles, they have become synonymous with strength, durability, and performance. In fact, 43 years after its first application, A-904s were still found in the Jeep lineup! TorqueFlites are known for their dependability, but many have endured a tremendous amount of abuse over 50-plus years when hooked up to V-8 Mopar powerplants. There is little doubt that some of these automatics could be prone to failure, or at least need a thorough rebuild. Tom Hand shares his decades of experience rebuilding TorqueFlite transmissions with chapters dedicated to troubleshooting, disassembly and reassembly, performance modifications, post-installation procedures, and the most thorough source guide offered in print, ever. The author walks you through the TorqueFlite rebuild with color photos showcasing step-by-step procedures with highly detailed, easy-to-follow text. This book will keep money in your pocket and add experience to your résumé, but more important, it will help you get your Mopar back on the road! p.p1 (margin: 0.0px 0.0px 0.0px 0.0px; font: 12.0px Arial)

A vital guide to the frontlines of our fight against climate change and the scientific and technological innovations that will revolutionize the world. The United States' accelerated plans to combat the existential threat of climate change finally give reason to hope. In Our Livable World, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, "smart highways" designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash—and next-generation carbon capture techniques to remove the emissions we have already released over the past several decades. Far from the geoengineering schemes of cli-fi action thrillers, real solutions are being developed, right this moment. Our Livable World features interviews with the innovators, real talk on the revolutionary technology, and a clear picture of a cleaner planet in the future. "An important book that shows the dawn of a new kind of environmental movement?an age where we invest in deeply creative and fascinating technical solutions that work in harmony with the Earth. Marc Schaus lays out the exciting future of environmental innovation before us." —Katie Patrick, author of How to Save the World

Author Trenton McGee, 4x4 suspension expert and host of Outdoor Channels Off-Road Adventures, explains 4x4 suspension systems in an easy-to-understand manner. He gets specific on types of suspensions available from all the major manufacturers including Jeep, Toyota, Ford, Chevy, and Dodge. He goes into a great level of detail on every different model, including early and modern model systems.

A guide to modifying and tuning modern electronic fuel injection (EFI) and electronic control unit (ECU) systems. Includes sections on standalones, an overview of EFI systems components and basic operation, and much more.
