Introduction to Paint Chemistry and principles of paint ...

Chemistry's Role. The pigment for paint is both man-made and natural it is made by crushing minerals into a fine powder-like texture. It is meant to be mixed with water, oil, or another base along with solvents, additives, and resins to for the paste needed to create what is known as paint. However in the end paint is man-made by default.

www.ChemistryIsLife.com - The Chemistry of Paint

Paint is any pigmented liquid, liquefiable, or solid mastic composition that, after application to a substrate in a thin layer, converts to a solid film. It is most commonly used to protect, color, or provide texture to objects. Paint can be made or purchased in many colors—and in many different types, such as watercolor or synthetic.
