#1 New York Times bestselling author Sherry! Woods returns readers to the beloved Southern town of Trinity Harbor with a story of second chances and finding love in unexpected places How could the sensible daughter of Trinity Harbor's self-proclaimed patriarch have taken in the boy caught hot-wiring her car? Whether the boy is a modern-day Huck Finn or not, Trinity Harbor is in an uproar. But for Daisy Spencer, guiding the orphaned ten-year-old is easy, an escape from her own tragic past. She can ignore the town's nay-saying. The only real obstacle is...that man. That man is the boy's uncle, Walker Ames, a tough DC cop who sees his unexpected nephew as his last chance at redemption. Soon he's commuting to the charming fishbowl of a town, where everyone assumes he's seduced Daisy—their best Sunday-school teacher! But to Walker, Daisy is a disconcerting mix of charming innocence and smart-mouthed excitement in a town that's not as sleepy as it looks.

Master builder Larry Haun brings you this complete, step-by-step guide to building a house.

First Published in 1988, this book offers a full, comprehensive guide into the toxicity of hormones during childbirth. Carefully compiled and filled with a vast repertoire of notes, diagrams, and references this book serves as a useful reference for students of midwifery, and other practitioners in their respective fields.

More than 1.3 billion people worldwide lack access to electricity. Although extension of the electricity grid remains the preferred mode of electrification, off-grid electrification can offer a solution to such cases. Rural Electrification through Decentralised Off-grid Systems in Developing Countries provides a review of rural electrification experiences with an emphasis on off-grid electrification and presents business-related aspects including participatory arrangements, financing, and regulatory governance. Organized in three parts, Rural Electrification through Decentralised Off-grid Systems in Developing Countries provides comprehensive coverage and state-of-the art reviews which appraise the reader of the latest trend in the thinking. The first part presents the background information on electricity access, discusses the developmental implications of lack of electricity infrastructure and provides a review of alternative off-grid technologies. The second part presents a review of experiences from various regions (South Asia, China, Africa, South East Asia and South America). Finally, the third part deals with business dimensions and covers participatory business models, funding challenges for electrification and regulatory and governance issues. Based on the research carried out under the EPSRC/ DFID funded research grant for off-grid electrification in South Asia, Rural Electrification through Decentralised Off-grid Systems in Developing Countries provides a multi-disciplinary perspective of the rural electrification challenge through off-grid systems. Providing a practical introduction for students, this is also a key reference for engineers and governing bodies working with off-grid electrification.

This simple, colorful picture dictionary is perfect for young readers. Here are more than 350 useful words in English, organized by topic, including school, sports, park, beach, house, street, farm, and wild animals. Each word is clearly illustrated for easy learning, and there is a full alphabetical list of words at the end of the book. A handy format, colorful illustrations, and simple, clear layout make this book ideal for early readers.

A variable game changer for those companies operating in hostile, corrosive marine environments, Corrosion Control for Offshore Structures provides critical corrosion control tips and techniques that will prolong structural life while saving millions in cost. In this book, Ramesh Singh explains the ABCs of prolonging structural life of platforms and pipelines while reducing cost and decreasing the risk of failure. Corrosion Control for Offshore Structures places major emphasis on the popular use of cathodic protection (CP) combined with high efficiency coating to prevent subsea corrosion. This reference begins with the fundamental science of corrosion and structures and then moves on to cover more advanced topics such as cathodic protection, coating as corrosion prevention using mill applied coatings, field applications, and the advantages and limitations of some common coating systems. In addition, the author provides expert insight on a number of NACE and DNV standards and recommended practices as well as ISO and Standard and Test Methods. Packed with tables, charts and case studies, Corrosion Control for Offshore Structures is a valuable guide to offshore corrosion control both in terms of its theory and application. Prolong the structural life of your offshore platforms and pipelines Understand critical topics such as cathodic protection and coating as corrosion prevention with mill applied coatings Gain expert insight on a number of NACE and DNV standards and recommended practices as well as ISO and Standard Test Methods.

Requiring little mathematical background, the book provides tools for hydraulic engineers and hydrologists concerned with estimating catchment runoff and floods. It condenses widely spread research literature on the subject of kinematic hydrology and emphasizes basic principles so it should be of value to students and teachers in these areas. The book is comprehensive and yet written in a basic way enabling practitioners to pick out relevant sections and apply them to real problems. It also contains a valuable collection of charts and equations as well as simple computer programs for modelling catchment runoff and stream flow using the kinematic equations. A wide spectrum of hydrological processes can be analyzed using the kinematic equations. Overland flow, stream flow and even groundwater flow can be studied. A review of the assumptions behind the theory indicates where alternative equations are more accurate. The book thus provides tools for hydrological simulation, stormwater system design and catchment management. It will be particularly useful for professors and students in postgraduate and senior years in hydrology, and practicing engineers and hydrologists in stormwater, flood and water resources fields.

Life can be cruel. People can be ruthless and evil. The world can be cold and uninviting. No one knows these things better than Josephine Geroux. By her own definition, she is a twenty-five year old "nobody with nothing," and she is content to stay that way. Growing up an orphan has made her tough and indifferent to the people around her until she meets a strangely familiar man with a face that haunts her for reasons she can't understand.Despite the pain that will inevitably ensue, she makes it her mission to discover what parts of her tragic puzzle she is missing. On her journey to discovering why the she feels an alarming connection to an absolute stranger, her greatest fear is reawakening the demons and darkness from the past that will surely overtake her if she lets her guard down. Little does Josephine know that the past should be the least of her worries. She is toying with a man who has already broken her heart once. She just doesn't realize it.Although she makes it a point to avoid interactions with others, Josephine's life becomes entangled with the enigmatic stranger. Before she realizes it, she has given herself over to the one person who is close enough to wreck her.

Pack Law states she must have more than one mate. Like Hell. Rather than be forced into a mating with more than one man, Dana flees the pack. Flees everything she knows, everyone she loves. She lives on the run and can't seem to find happiness. All that changes the day her first love, Nathan, finds her and brings her back home. He's not letting her go, not again. As alpha, he now makes the rules and he's decided to hell with the laws, he wants Dana. Except Dana's changed since she left. Maybe the pack ways aren't so bad after all and when she decides to accept fate... Extremely hot and sexy situations await!
