This is the second volume of the book: H. Amman, Linear and Quasilinear Parabolic Problems. This volume is concerned with an in-depth theory of function spaces in an Euclidean setting. It contains several new features, not covered in the literature so far.

This treatise gives an exposition of the functional analytical approach to quasilinear parabolic evolution equations, developed to a large extent by the author during the last 10 years. This approach is based on the theory of linear nonautonomous parabolic evolution equations and on interpolation-extrapolation techniques. It is the only general method that applies to noncoercive quasilinear
