Following the Formula in Beowulf, Örvar-Odds saga, and Tolkien proposes that Beowulf was composed according to a formula. Michael Fox imagines the process that generated the poem and provides a model for reading it, extending this model to investigate formula in a half-line, a fitt, a digression, and a story-pattern or folktale, including the Old-Norse Icelandic Örvar-Odds saga. Fox also explores how J. R. R. Tolkien used the same formula to write Sellic Spell and The Hobbit. This investigation uncovers relationships between oral and literate composition, between mechanistic composition and author, and between listening and reading audiences, arguing for a contemporary relevance for Beowulf in thinking about the creative process.

Lists and catalogues have been en vogue in philosophy, cultural, media and literary studies for more than a decade. These explorations of enumerative modes, however, have not

yet had the impact on classical scholarship that they deserve. While they routinely take (a limited set of) ancient models as their starting point, there is no comparably comprehensive study that focuses on antiquity; conversely, studies on lists and catalogues in Classics remain largely limited to individual texts, and – with some notable exceptions – offer little in terms of explicit theorising. The present volume is an attempt to close this gap and foster the dialogue between the recent theoretical re-appraisal of enumerative modes and scholarship on ancient cultures. The 16 contributions to the volume juxtapose literary forms of enumeration with an abundance of ancient non-, sub- or para-literary practices of listing and cataloguing. In their different approaches to this vast and heterogenous corpus, they offer a sense of the hermeneutic, epistemic and methodological challenges with which the study of enumeration is faced, and elucidate how pragmatics, materiality, performativity and aesthetics are mediated in lists and catalogues.

This book explores the voices of nonhuman things in Anglo-Saxon literature and material culture, making a valuable contribution to 'thing theory'.

Applying linguistic theory to the study of Homeric style, Egbert J. Bakker offers a highly innovative approach to oral poetry, particularly the poetry of Homer. By situating formulas and other features of oral style within the wider contexts of spoken language and communication, he moves the study of oral poetry beyond the landmark work of Milman Parry and Albert Lord. One of the book's central features, related to the

research of the linguist Wallace Chafe, is Bakker's conception of spoken discourse as a sequence of short speech units reflecting the flow of speech through the consciousness of the speaker. Bakker shows that such short speech units are present in Homeric poetry, with significant consequences for Homeric metrics and poetics. Considering Homeric discourse as a speech process rather than as the finished product associated with written discourse, Bakker's book offers a new perspective on Homer as well as on other archaic Greek texts. Here Homeric discourse appears as speech in its own right, and is freed, Bakker suggests, from the bias of modern writing style which too easily views Homeric discourse as archaic, implicitly taking the style of classical period texts as the norm. Bakker's perspective reaches beyond syntax and stylistics into the very heart of Homeric—and, ultimately, oral—poetics, altering the status of key features such as meter and formula, rethinking their relevance to the performance of Homeric poetry, and leading to surprising insights into the relation between "speech" and "text" in the encounter of the Homeric tradition with writing.

This book is the classic work on forms of the European folktale.

The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. The series considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the

Cognitive poetics is a new way of thinking about literature, involving the application of cognitive linguistics and psychology to literary texts. This book is the first introductory text to this growing field. In *Cognitive Poetics: An Introduction*, the reader is encouraged to re-evaluate the categories used to understand literary reading and analysis. Covering a wide range of literary genres and historical periods, the book encompasses both American and European approaches. Each chapter explores a different cognitive-poetic framework and relates it to a literary text. Including a range of activities, discussion points, suggestions for further reading and a glossarial index, the book is both interactive and highly accessible. *Cognitive Poetics: An Introduction* is essential reading for students on stylistics and literary-linguistic courses, and will be of interest to all those involved in literary studies, critical theory and linguistics.
