If you want to entertaining books, lots of novels, tale, jokes, and more fictions collections are next launched, from best seller to one ...

Plant Tissue Culture Techniques and Experiments is a manual that contains laboratory exercises about the demonstration of the methods and different plant materials used in plant tissue culture. It provides an overview on the plant cell culture techniques and plant material options in selecting the explant source. This book starts by discussing the proper setup of a tissue culture laboratory and the selection of the culture medium. It then explains the determination of an explant which is the ultimate goal of the cell culture project. The explant is a piece of plant tissue that is used in tissue culture. Furthermore, the book discusses topics about callus induction, regeneration and morphogenesis process, and haploid plants from anther and pollen culture. The meristem culture for virus-free plants and in vitro propagation for commercial propagation of ornamentals are also explained in this manual. The book also provides topics and exercises on the protoplast isolation and fusion and agrobacterium-mediated transformation of plants. This manual is intended for college students, both graduate and undergraduate, who study chemistry, plant anatomy, and plant physiology.

The authors in this work focus on and explore human computer interaction (HCI) by bringing together the best practice and experience from HCI and interaction design.

Get ready to get your hands dirty with *Metamorphic Rocks*. With its reader-friendly and interactive approach, this title covers key curriculum Earth science topics in an engaging way. This title explores the natural processes, how geologists study metamorphic rocks, and how metamorphic rocks relate to the reader's daily life. Aligned to Common Core Standards and correlated to state standards. Core Library is an imprint of Abdo Publishing Company.

Cellular communication and especially mobile handsets are an essential part of our daily lives. Therefore, they need to be secure and work reliably. But mobile handsets and cellular networks are highly complex systems and securing them is a challenging task. This work takes a new path for securing mobile handsets and targets the cellular modem as the route to improve the security of mobile handsets and cellular networks. We target the modem since it is one of the essential parts of a mobile handset. The modem provides the radio link to the cellular network therefore making it a key element in the task to secure mobile communications. But cellular modems are proprietary and closed systems that cannot be easily analyzed in the full or even modified to improve security. We investigate the security of the cellular modem at its border to the mobile phone operating system. In this work we analyze and improve the security of the cellular modem interface. We further show how the modem interface can be abused for attacks and how such attacks can be prevented. Throughout this work we show that the cellular modem has a significant impact on mobile phone security.

This book covers the latest advances in polymer-inorganic nanocomposites, with particular focus on high-added-value applications in fields including electronics, optics, magnetism and biotechnology. The unique focus of this book is on electronic, optical, magnetic and biomedical applications of hybrid nanocomposites. Coverage includes: Synthesis methods and issues and production scale-up; Characterization methods; Electronic applications; Optical applications and Photonics; Magnetic applications; and Biomedical applications. The book offers readers a solid grasp of the state of the art, and of current challenges in non-traditional applications of hybrid nanocomposites.

This book describes the evolving CBRN risk landscape and highlights advances in the "core" CBRN technologies, including when combined with (improvised) explosive devices (CBRNe threats). It analyses how associated technologies create new safety and security risks, challenging certain assumptions that underlie current control regimes. The book also shows how technologies can be enablers for more effective strategies to mitigate these risks. 21st-century safety and security risks emanating from chemical, biological, radiological and nuclear materials – whether resulting from natural events, accidents or malevolent use – are increasingly shaped by technologies that enable their development, production or use in ways that differ from the past. Artificial intelligence, the use of cyberspace, the revolution in the life sciences, new manufacturing methods, new platforms and equipment for agent delivery, hypersonic weapons systems, information tools utilised in hybrid warfare – these and other technologies are reshaping the global security environment and CBRN landscape. They are leading to a growing potential for highly targeted violence, and they can lead to greater instability and vulnerability worldwide. At the same time, technology offers solutions to manage CBRN risks. Examples are faster detection, more accurate characterisation of the nature and origin of CBRN agents, new forensic investigation methods, or new medical treatments for victims of CBRN incidents. New educational concepts help to foster a culture of responsibility in science and technology and strengthen governance. New training methods help develop practical skills to manage CBRN risks more effectively. The book concludes that there is a growing need for a holistic framework towards CBRN risk mitigation. Traditional arms control mechanisms such as global, regional or bilateral treaties and export controls are still needed, as they provide a necessary legal and institutional framework. But laws and technology denial alone will not suffice, and institutional mechanisms can at times be weak. Given the pace of technological progress and the diffusion of critical knowledge, tools and materials, policymakers must accept that CBRN risks cannot be eliminated altogether. Instead, society has to learn to manage these risks and develop resilience against them. This requires a "softer", broadly based multi-stakeholder approach involving governments, industry, the research and development communities, educators, and civil society. Furthermore, educating policymakers that cutting-edge technologies may seriously affect global strategic stability could create incentives for developing a more creative and contemporary arms control strategy that fosters cooperation rather than incremental polarisation.

Unmanned aerial vehicles (UAV) have already become an affordable and cost-efficient tool to quickly map a targeted area for many emerging applications in the arena of ecological monitoring and biodiversity conservation. Managers, owners, companies, and scientists are using professional drones equipped with high-resolution visible, multispectral, or thermal cameras to assess the state of ecosystems, the effect of disturbances, or the dynamics and changes within biological communities inter alia. We are now at a tipping point on the use of drones for these type of applications over natural areas. UAV missions are increasing but most of them are testing applicability. It is time now to move to frequent revisiting missions, aiding in the retrieval of important biophysical parameters in ecosystems or mapping species distributions. This Special Issue shows UAV applications contributing to a better understanding of biodiversity and ecosystem status, threats, changes, and trends. It documents the enhancement of knowledge in ecological integrity parameters mapping, long-term ecological monitoring based on drones, mapping of alien species spread and distribution, upscaling ecological variables from drone to satellite images: methods and approaches, rapid risk and disturbance assessment using drones, mapping albedo with UAVs, wildlife tracking, bird colony and chimpanzee nest mapping, habitat mapping and monitoring, and a review on drones for conservation in protected areas.

"All good marketing is local. Global companies know this and are going "glocal." There is also a trend towards the Internet of Everything, which revolutionizes the whole marketing discipline. Svend Hollensen has captured all the latest trends very well with the new cases in his seventh edition of Global Marketing." Philip Kotler, S. C. Johnson & Son Distinguished Professor of International Marketing, Kellogg School of Management, Northwestern University In this era of increased globalisation, if there is one textbook that today's students and tomorrow's marketers need to read, it is Svend Hollensen's world renowned text. For over fifteen years "Global Marketing" has been the definitive, truly international guide to marketing. During that time, borders have become ever more transient and this book more central to the work of marketers all around the world. Now into its seventh edition, "Global Marketing" continues to be the most up-to-date and thorough text of its kind, with cutting-edge case studies and a focus on the impact of new technologies and perspectives on international marketing. This seventh edition expands on a number of new topics, including: shared economy solutions, social media, e-services and smartwatch app marketing, as well as many more. It is ideal for undergraduate and postgraduate students studying international marketing, and for any practitioners who want to take their global marketing strategies to the next level. "The world today truly is flat, and a sound global perspective is an absolute must for all students. Svend Hollensen's Global Marketing provides a thorough and comprehensive treatment that delivers on this need." Michael R. Solomon, Professor of Marketing, Haub School of Business, Saint Joseph's University, USA, and Professor of Consumer Behaviour, University of Manchester, UK The best textbook on global marketing I have come across! The case studies, many of them available online, provide an excellent basis for class discussion. Elisabeth Gotze, Vienna University of Economics and Business Excellent level of detail in each chapter to support learning around strategic global marketing decisions. The video case studies are a huge bonus and really help to bring the subject alive. Giovanna Battiston, Senior Lecturer in Marketing, Sheffield Hallam University Key Features include: A clear part structure, organised around the five main decisions that marketing people in companies face in connection to the global marketing process End of part and end of chapter case studies helping students to understand how the theory relates to real world application Video case studies (available at [www.pearsoned.co.uk/hollensen](http://www.pearsoned.co.uk/hollensen)), showing how practitioners are using Global Marketing in their work About the author Svend Hollensen is Associate Professor of International Marketing at the University of Southern Denmark and has worked as a marketing consultant for several international companies and organizations. As well as this book, he is the author of other Pearson texts, including "Marketing Management" and "Essentials of Global Marketing." Student resources specifically written to complement this textbook are at [www.pearsoned.co.uk/hollensen](http://www.pearsoned.co.uk/hollensen) "
