When an AF-P DX NIKKOR 18–55mm f/3.5–5.6G VR is mounted on the camera, vibration reduction can be enabled or disabled using the Optical VR option in the shooting menu (0 Optical VR). If On is selected, vibration reduction will take effect whenever the shutter-release button is pressed halfway. Vibration reduction reduces blur caused by camera shake, allowing shutter speeds up to 4.0 stops slower than would otherwise be the case, increasing the range of shutter speeds available.
