The Math Curriculum for Gifted Students series provides gifted and advanced learners with challenging activities to extend their mathematical thinking. Developed by the Center for Gifted Education at William & Mary, the lessons, activities, and extensions in each book are aligned to national standards and are designed to provide high-ability learners advancement beyond the general curriculum. In Math Curriculum for Gifted Students (Grade 3), the 21 lessons cover mathematics content for grade 3 and are divided into five sections: number and operations in Base Ten, operations and algebraic thinking, number and operations, fractions, measurement and data, and geometry. Each lesson includes a teacher page that outlines the Common Core State Standards and mathematical practices covered, estimated time, key terms, materials, and objectives; a challenging activity to allow students to explore the concepts in depth; practice problems; and an assessment similar to CCSS-based grade-level standardized assessments. Ideal for gifted classrooms or gifted pull-out groups, lessons are easy to implement and feature engaging above-level student activities. Optional student workbooks, which feature ample room for student responses, are also available in sets of 5.

Gifted students have the potential to learn material earlier and faster, to handle more abstraction, and to solve complex problems better. This potential, however, needs stimulating experiences from home and school or it will not unfold. These books are designed to help teachers provide the engaging curricula that will nurture this potential in school. The Science book includes a medical simulation in which teams of students work as doctors to diagnose patients' cases, a food science project in which students use a variety of information-gathering techniques to learn how nutrition impacts performance, a hands-on study of human memory and expertise, and a study of the physics of sports. Grades 6-8

For K-12 math and science teachers, Callard-Szulgit (gifted studies, State U. of New York at Brockport) and Szulgit (Hiram College) provide 37 math, science, and technology/business activities and ideas for gifted students, with some of the exercises written directly for them.

A multi-faceted handbook that integrates the unique roles of educators and parents.

Build student success in math with the only comprehensive guide for developing math talent among advanced learners. The authors, nationally recognized math education experts,

offer a focused look at educating gifted and talented students for success in math. More than just a guidebook for educators, this book offers a comprehensive approach to mathematics education for gifted students of elementary or middle school age. The authors provide concrete suggestions for identifying mathematically talented students, tools for instructional planning, and specific programming approaches. Developing Math Talent features topics such as strategies for identifying mathematically gifted learners, strategies for advocating for gifted children with math talent, how to design a systematic math education program for gifted students, specific curricula and materials that support success, and teaching strategies and approaches that encourage and challenge gifted learners.

This is a combo volume that incorporates all four volumes for level 1. The interior of the 4 in 1 volume is always updated to contain the latest edition of the individual volumes. About "Competitive Mathematics for Gifted Students" This series provides practice materials and short theory reminders for students who aim to excel at problem solving. Material is introduced in a structured manner: each new concept is followed by a problem set that explores the content in detail. Each book ends with a problem set that reviews both concepts presented in the current volume and related topics from previous volumes. The series forms a learning continuum that explores strategies specific to competitive mathematics in depth and breadth. Full solutions explain both reasoning and execution. Often, several solutions are contrasted. The problem selection emphasizes comprehension, critical thinking, observation, and avoiding repetitive and mechanical procedures. Ready to participate in a math competition such as MOEMS, Math Kangaroo in USA, or Noetic Math? This series will open the doors to consistent performance. About Level 1 This level of the series is designed for students who know addition and subtraction with multi-digit numbers as well as simple multiplications of one-digit numbers. Some of the problems, however, involve advanced concepts and may be useful for older students.
