*Multinuclear NMR Spectroscopy - Alan Brisdon*

The most important aspect of multinuclear NMR is that all spin active nuclei can couple to each other and that the multiplicity of the coupling is given by  $2nI + 1$  where  $n$  = the number of equivalent nuclei that are being coupled to.

*Multinuclear NMR Data Table | Anasazi Instruments*

Our book covers the Periodic Table as multinuclear spectrometers do, and introductory chapters are devoted to the essentials of the NMR experiment and its products. Primary products are chemical shifts (including anisotropies), spin-spin coupling constants, and relaxation times; the ultimate product is a knowledge of content and constitution, dynamic as well as static.

Abstract In this multinuclear NMR study myo-inositol is identified as a glia-specific marker for in vivo NMR studies. The unusually high inositol concentration may participate in the osmoregulatory system in astrocytes. Primary astrocytes also synthesize and export high amounts of hypotaurine, an intermediate of taurine synthesis.
