Suffering, Pain, and Risk of Brain Damage in the Fetus and Newborn. Until the 1980s it was denied that fetuses and neonates feel pain. With the advent of a deeper understanding of the pathophysiology and new diagnostic tools, the last 30 years have seen great developments in this field, but the treatment of neonatal and fetal pain is still a controversial issue and a central topic, not only in specialties directly concerned with it, but also in bioethics.

It was found that greater neonatal pain led to lower body weight (ANOVA, $P = 0.01$) and HC (ANOVA, $P = 0.04$) percentiles at 32 weeks GA, independent of other medical confounds. This study suggests that successful postnatal growth is dependent on the quantity of painful procedures encountered during early NICU, showing that brain maturation is affected by neonatal affliction, rather than degree of prematurity at birth.

The first resource of its kind, this authoritative handbook holistically addresses the multidimensional aspects of perinatal and neonatal palliative care. Written by an interprofessional team of renowned specialists, it is both a text and an evidencebased reference for all members of the palliative care team. This book helps individual team members forge interdisciplinary approaches to care, assess current programs, improve the quality of care, and tailor new models of care. Encompassing the perspectives of numerous multidisciplinary healthcare providers, the book underscores the unique aspects of perinatal and neonatal palliative care, with a focus on improving quality of life, as well as comfort at the end of life. It describes healthcare for neonates and pregnant mothers, care and support of the family, planning and decision-making, and effective support for grief and bereavement, addressing all palliative and neonatal care settings. Other chapters focus on the prenatal period after diagnosis of the expected baby's life-threatening condition. These include such topics as care of the mother, delivering devastating news, and advance care planning. Each chapter contains photos, figures, and/or tables and case studies with clinical implications and critical thinking questions. Also included is an extensive listing of relevant palliative care organizations. Paintings and poetry provide an artistic backdrop to the authors' inspiring words. Key Features: Addresses a growing need for specific provider resources in neonatal palliative care Covers the clinical and emotional aspects of palliative care for babies and their families Abundant resources for effective and compassionate family-centered care Case studies with critical thinking questions Accompanying video clips of healthcare and family interactions Supplemental image bank included

This Second Edition is a significant revision of the leading text and clinical reference on pediatric pain. Written by an international group of experts from all relevant disciplines, this new edition is a vital reference for all pain practitioners, and for nurses, psychologists, PTs, anesthesiologists, and pediatricians dealing with acute and chronic pediatric pain. This edition includes new and expanded information on NSAIDs, opioids, and regional anesthesia. New chapters cover sedation, pain in the ICU, multidisciplinary pain services, palliative care, and the long-term consequences of pain. User-friendly new features include many more illustrations of techniques.

This challenging volume gathers a selection of the mass of material available from the major human rights instruments, from first drafts, legislative histories, and contemporary commentaries, from more recent scholarship as well as from the General Comments and Concluding Observations and Recommendations of the various treaty monitoring bodies relating to the topic of the unborn child. Contemporary reinterpretations of these documents are held up to the searchlight of historical context, including a reminder of the original purpose and meaning and the philosophical foundation of modern international human rights law.

that produce pain in older individuals. All that has changed. Drs. Anand and McGrath have joined in writing and editing this collection of chapters on many aspects of nociception and the responses within the central nervous system, behavioral responses, endocrine, cardiovascular and immune functions. The question of the benefits of some pain to communicate the presence of a potentially dangerous event is the subject of a thoughtful discussion in Chapter 4. Nociception may trigger appropriate physiological responses. However, severe responses may in themselves be deleterious as documented by the improved outlook when they are blocked during surgery. The principles and pharmacotherapy with systemic analgesic drugs (especially opioids) is given extensive and informative consideration in Chapters 5 and 6. Regional and topical anesthesia in newborn infants is thoroughly covered in Chapter 7. A welcome addition to the discussions in first chapters of the book, is the report of experienced neonatal nurses on individualized supportive care to reduce pain and stress in neonatal intensive care units. They provide a critical review of studies of behaviors of preterm and sick infants, which they augment with a description of current practices. The remaining topics that serve to broaden the perspective of those caring for infants are indicated by the chapter titles: "Moral and ethical issues in clinical practice", "Research design and research ethics", "Social and legal issues", and finally, "Future directions" by the editors.

Co-authored by an interprofessional collaborative team of physicians and nurses, Merenstein & Gardner 's Handbook of Neonatal Intensive Care, 9th Edition is the leading resource for interprofessional, collaborative care of critically ill newborns. It offers comprehensive coverage with a unique interprofessional collaborative approach and a real-world perspective that make it a practical guide for both nurses and physicians. The new ninth edition features a wealth of expanded content on delivery-room care; new evidence-based care "bundles"; palliative care in the NICU; interprofessional collaborative care of parents with depression, grief, and complicated grief; and new pain assessment tools. Updated high-quality references have also been reintegrated into the book, making it easier for clinicians to locate research evidence and standards of care with minimal effort. These additions, along with updates throughout, ensure that clinicians are equipped with the very latest clinical care guidelines and practice recommendations — all in a practical quick-reference format for easy retrieval and review. **UNIQUE!** Core author team of two physicians and two nurses gives this internationally recognized reference a true interprofessional collaborative approach that is unmatched by any other resource. Consistent organization within clinical chapters include Physiology/Pathophysiology, Etiology, Prevention, Data Collection (History, Signs and Symptoms, and Laboratory Data), Treatment/Intervention, Complications, and Parent Teaching sections. **UNIQUE!** Color-highlighted point-of-care clinical content makes high-priority clinical content quick and easy to find. **UNIQUE!** Parent Teaching boxes outline the relevant information to be shared with a patient 's caregivers. Critical Findings boxes outline symptoms and diagnostic findings that require immediate attention to help the provider prioritize assessment data and steps in initial care. Case studies demonstrate how to apply essential content to realistic clinical scenarios for application-based learning. **NEW!** Updated content throughout reflects the latest evidence-based practice, national and international guidelines, and current protocols for interprofessional collaborative practice in the NICU. **NEW!** Up-to-date, high-quality references are now reintegrated into the text for quick retrieval, making it easier for clinicians to locate research evidence and standards of care with minimal effort. **NEW!** Expanded content on delivery-room care includes the impact of staffing on quality of care, delayed cord clamping, resuscitation, and more. **NEW!** Coverage of the new evidence-based care "bundles" keeps clinicians up to date on new guidelines that have demonstrated improved outcomes of very preterm infants. **NEW!** Coverage of new pain assessment tools equips NICU providers with essential resources for maintaining patient comfort. **NEW!** Expanded coverage of palliative care in the NICU provides the tools needed to ensure patient comfort. **NEW!** Expanded coverage of interprofessional collaborative care of parents with depression, grief, and complicated grief prepares clinicians for this essential area of practice.
