If two non-vertical lines that are in the same plane has the same slope, then they are said to be parallel. Two parallel lines won't ever intersect. If two non-vertical lines in the same plane intersect at a right angle then they are said to be perpendicular.

Parallel and Perpendicular Lines. Parallel lines are two lines in the same plane that do not intersect. Two non-vertical lines are parallel if and only if they have the same slope. If you are given the equation of a line and a point not on that line, you can

Parallel Lines. How do we know when two lines are parallel? Their slopes are the same! The slope is the value m in the equation of a line: $y = mx + b$.

Example: Find the equation of the line that is: parallel to $y = 2x + 1$; and passes through the

1. Write the equation of the line that is parallel to the graph of $y =$

whose y -intercept is -2 . $m = 1/2$ $b = -2$

$y = mx + b$ $y = 1/2x - 2$

$1 x + 6$, and $2 2$.
