Most prognostic factors literature describes those factors that directly relate to the tumor itself. However, many other factors, not directly related to the tumor, also affect the outcome. To comprehensively represent these factors we propose three broad groupings of prognostic factors: 'tumor'-related prognostic factors, 'host'-related prognostic factors, and 'environment'-related prognostic factors.

Prognostic factors in cancer - PubMed

Many prognostic factors literature describes those factors that directly relate to the tumor itself. However, many other factors, not directly related to the tumor, also affect the outcome. To comprehensively represent these factors we propose three broad groupings of prognostic factors: 'tumor'-related prognostic factors, 'host'-related prognostic factors, and 'environment'-related prognostic factors.

Prognostic factors in cancer.

Many Factors Can Affect Your Prognosis. Some of the factors that affect prognosis include: The type of cancer and where it is in your body; The stage of the cancer, which refers to the size of the cancer and if it has spread to other parts of your body; The cancer's grade, which refers to how abnormal the cancer cells look under a microscope. Grade provides clues about how quickly the cancer is likely to grow and spread.

Understanding Cancer Prognosis - National Cancer Institute

Prognostic Factors in Cancer, 3rd edition Amends and streamlines the authoritative monograph on prognostic factors and their use in planning treatment for cancer patients. The first part provides an update on the science of prognosis in general and prognosis in cancer patients in particular.

Cancer Sci. 2020 Nov 7. doi: 10.1111/cas.14722. Online ahead of print. **ABSTRACT**Metastatic burden is a critical factor for therapy decision-making in metastatic hormone-sensitive prostate cancer. This study aimed to identify prognostic factors in men with high or low metastatic burden treated with primary androgen-deprivation therapy.

Differential prognostic factors in low- and high-burden de ...

In breast cancer, a number of factors are considered truly prognostic; these factors include patient lymph node status, tumor size, histologic grade, age, and race. Additional factors considered both prognostic and predictive of outcomes include steroid receptors (estrogen and progesterone), DNA and proliferative markers, and the epidermal growth factor receptor family.

Clinically Established Prognostic Factors in Breast Cancer ...

Metastatic burden is a critical factor for therapy decision-making in metastatic hormone-sensitive prostate cancer. This study aimed to identify prognostic factors in men with high or low metastatic burden treated with primary androgen-deprivation therapy. The study included 2450 men with de novo ...

Differential prognostic factors in low- and high-burden de ...

Optimizing treatment based on prognostic factors plays an important role in the management of female breast cancer. The standard prognostic factors currently applied in new cases of breast cancer include axillary lymph node status, histologic subtype, tumor size, nuclear grade, hormone receptor status, measures of proliferation, and molecular markers such as HER2 overexpression. Of these, the presence or absence of metastatic carcinoma in the axillary lymph nodes is the most powerful ...

Prognostic Factor - an overview | ScienceDirect Topics

Prognostic and predictive factors are universally utilized in the management of breast cancer and can be used to stratify patients into two groups: (1) those who are expected to derive the most benefit from adjuvant systemic therapy, which includes all patients with lymph node metastases and a subset of node-negative patients, and (2) those for which the risks and costs of adjuvant therapy outweigh the expected benefit.<sup>3</sup>

Prognostic and Predictive Factors in Breast Cancer

[1], in a systematic overview of prognostic factors for non-small cell lung cancer, identified 887 articles published during a decade and more than 150 possible prognostic factors for non-small cell lung cancer. A prognostic factor is generally defined as a factor, measured before treatment, that has an impact on a patient's outcome "independently" of received treatment or of the general class of treatment.

Prognostic factors in early-stage ovarian cancer - eCancer

Background: Treatment of metastatic breast cancer (MBC) remains palliative. Patients with MBC represent a heterogeneous group whose prognosis and outcome may be dependent on host factors. The purpose of the present study was dual: first, to draw up a list of factors easily available in everyday clinical practice requiring no sophisticated or costly methods and second, to provide results from a ...

Prognostic factors in 1,038 women with metastatic breast ...

Numerous prognostic and predictive factors for breast cancer have been identified by the College of American Pathologists (CAP) to guide the clinical management of women with breast cancer.

What are the prognostic and predictive factors for breast ...

Traditional prognostic factors, ie, those that predict the risk of recurrence or death from breast cancer, include number of positive axillary nodes, tumor size, tumor grade (histologic or...
