***** 'I LOVED THIS BOOK!!!!!!!!!!!!!!' Amazon reviewer ***** 'Outrageously funny!' Amazon reviewer ***** 'Extremely touching' Amazon reviewer ***** 'An absolute delight' Netgalley reviewer A ninety-year-old woman with Alzheimer's and a heartbroken young man end up sharing a ride to Brussels that changes their lives forever. When Alex pulls up to meet "Max", he expects everything but a ninety-year-old lady who has her heart set on getting to Brussels by carpool. As for 'Max', who is actually called Maxine, she could not be more ill at ease when settling into the seat next to this young man with bloodshot eyes. God help her if he turned out to be a drug addict who hasn't slept in days! When it becomes clear that Maxine is suffering from Alzheimer's and wants to take matters in her own hands while she still can, and that Alex battles severe depression, a wonderful friendship starts to form between the unlikely pair. Before long, their travel plans take an unexpected turn... Translated from the French by Kelly Lardin.

This new book investigates how the relationships of international business networks (one buyer-multiple suppliers) develop over time, looking at the geographical angle as well as an actor composition point of view. Bart Kamp presents a framework that reveals what business-to-business (b2b) factors explain buyer-supplier co-location patterns, making it possible to predict the geographical behaviour of suppliers, and also assesses whether longevity is truly the deep-rooted feature of international b2b network relationships that it is often claimed to be.

Innovation has a more and more important role in all industries, leading to a growing interest on the efficient management of the innovation process. For a better understanding of this process, it has been organised in 5 stages: idea generation, idea selection, idea development, idea implementation and revision. This work provides a short review for each one of these 5 stages of the innovation process, its tools, methodologies and processes. The AutoEuropa case study, described in this work, illustrates an innovation process in which a large number of tools and methodologies have been used with excellent results. In this case, a prototype idea

management system has been used with a strong impact on the results, specially, at the organisation and productivity level of the idea management team. For a better understanding of the current practices of innovation management, a survey has been developed, distributed and analysed. The survey results provided information on which are the tools and methodologies more used and graded the organisations as active, watcher or passive. From the analysis of the results, it was possible to detect significant correlations between the use of the different tools and confirm that the organisation described in the case study had made a strongly innovative initiative.

This Book aims at strengthening the scientific basis for sustainable development. Scientists are improving their understanding about Nature. Technologists are harnessing the potential and resources for economic growth. Scientists, through increased research, can provide efficient techniques for supporting the prudent management of the environment. The uses of remote sensing techniques, efficient materials, application of polymer technology, alternative energy forms, etc., are other topics of discussions included in the book.

The book examines ecological issues such as climate change and biodiversity, articulating local and global scales, and short and long term perspectives, questioning what "development" and "progress" are. The goal is to show how diverging points of view are conflictingly articulated to one another, in a political ideology perspective. This perspective, which is close to the main actor's point of view, allows displacement of the usual analysis, and offers a new synthesis.

The Big Book of Tiny Cars presents entertaining profiles of automotive history ' s most famous—and infamous—microcars and subcompacts from 1901 to today. Illustrated with photos and period ads.

The papers in this volume consider the innovation process in vehicle design. Topics include: trends in propulsion technology; powertrain development methods; hybrid vehicle technologies; choice of components; vehicle design and visualization; and vehicle systems technologies.

Sources are eclectic, results mixed, but one thing is certain: car design is being forced up an ever tightening spiral of creativity. These machines are memorials of our tastes, yearnings and capabilities. They have layers of meaning and can, as Henry Ford knew, be read like a book... if only you know how. The story of the car is the story of how the objects of industry became a medium of artistic expression. This book tells that story in a series of case studies which reveal national characteristics: American flair, German technical suprematism, French vernacular chic, gorgeous Italian sculpture, English antiquarianism, Japanese ingenuity, Swedish responsibility. Cars featured appear in chronological date order from the 1908 Ford Model T to 2003 BMW 5 Series. The chosen cars will be specially photographed in a uniform style and reproduced in very textured, 4 colour b/w so as to distance this book from the cliches and conventions of specialist automotive publishing and to highlight form and shape. Each picture will be accompanied by a short critical essay including essential historical material together with colourful anecdotage and quotations as well as a persuasive aesthetic appraisal of each vehicle. This lavish and beautifully designed book is the gift book for all car enthusiasts and design aficionados.

Did you know that American icon 7-Eleven is controlled by Japanese retail giant Ito-Yokado, Miller Beer is brewed by South African Brewer SABMiller, and that the Los Angeles Dodgers are owned by The News Corporation, an Australian company?

Maximizing reader insights into project management and handling complexity-driven risks, this book explores propagation effects, non-linear consequences, loops, and the emergence of positive properties that may occur over the course of a project. This book presents an introduction to project management and analysis of traditional project management approaches and their limits regarding complexity. It also includes overviews of recent research works about project complexity modelling and management as well as project

complexity-driven issues. Moreover, the authors propose their own new approaches, new methodologies and new tools which may be used by project managers and/or researchers and/or students in the management of their projects. These new elements include project complexity definitions and frameworks, multi-criteria approaches for project complexity measurement, advanced methodologies for project management (propagation studies to anticipate potential behaviour of the project, and clustering approaches to improve coordination between project actors) and industrial case studies (automotive industry, civil engineering, railroad industry, performing arts,...) and exercises (with their solutions) which will allow readers to improve and strengthen their knowledge and skills in the management of complex and (thus) risky projects.
