biology and culture of the main live prey and microalgae used as feeds in the aquaculture of major commercial species including shrimps, sea bass, halibut, cod and bivalves. Contents include comprehensive details of the status of marine aquaculture in relation to live prey, and chapters covering the biology, production, harvesting, processing and nutritional value of microalgae and the main prey species: rotifers, Artemia and copepods. The editors have drawn together an impressive international team of contributors, providing a work that is set to become the standard reference and practical guide on the subject for many years to come. Live Feeds in Marine Aquaculture is an essential purchase for anyone involved in marine aquaculture, including fish farmers, researchers, and personnel in feed and equipment companies supplying the aquaculture trade. An extremely valuable tool as a reference and practical manual for students and professionals alike; libraries in all universities and research establishments where biological and aquatic sciences and aquaculture are studied and taught, should have copies available on their shelves.

This Element provides a detailed overview of the structural changes in the Asia-Pacific region from the early 2000s onwards. It reviews the most relevant literature on this important topic. The following two research areas are explored: first, by deploying visual network analysis (VNA), we analyse cross-border interbank claims and liabilities of the individual countries located in the Asia-Pacific region. Such an analysis evaluates interbank exposures to systematically important banks within the specific market. The important advantage of VNA is that it allows us to examine the 'hierarchical' cross-country interbank contagion risk that seems to have been neglected in similar studies. Secondly, we evaluate the contagion risk to the

individual countries spreading from the financial centres in Hong Kong, Singapore, Tokyo, New York and London. The analysis unveils links and statistical factors that could be used as a key tool for detecting the potential triggers of systemic risk.

This open access book addresses the issue of diffusing sustainable energy access in low- and middle-income contexts. Access to energy is one of the greatest challenges for many people living in low- income and developing contexts, as around 1.4 billion people lack access to electricity. Distributed Renewable Energy systems (DRE) are considered a promising approach to address this challenge and provide energy access to all. However, even if promising, the implementation of DRE systems is not always straightforward. The book analyses, discusses and classifies the promising Sustainable Product-Service System (S.PSS) business models to deliver Distributed Renewable Energy systems in an effective, efficient and sustainable way. Its message is supported with cases studies and examples, discussing the economic, environmental and socioethical benefits as well as its limitations and barriers to its implementation. An innovative design approach is proposed and a set of design tools are supplied, enabling readers to create and develop Sustainable Product-Service System (S.PSS) solutions to deliver Distributed Renewable Energy systems. Practical applications of the book's design approach and tools by companies and practitioners are discussed and the book will be of interest to readers in design, industry, governmental institutions, NGOs as well as researchers.

In The Diplomat in the Corner Office, Timothy L. Fort, one of the founders of the business and

peace movement, reflects on the progress of the movement over the past 15 years—from a niche position into a mainstream economic and international relations perspective. In the 21st century global business environment, says Fort, businesses can and should play a central role in peace-building, and he demonstrates that it is to companies' strategic advantage to do so. Anchoring his arguments in theories from economics and international relations, Fort makes the case that businesses must augment familiar notions of corporate responsibility and ethical behavior with the concept of corporate foreign policy in order to thrive in today's world. He presents a series of case studies focusing on companies that have made peace a goal, either as an end in itself or because of its instrumental value in building their companies, to articulate three different approaches that businesses can use to quell international conflict— peace making, peace keeping, and peace building. He then demonstrates their effectiveness and proposes policies that can be utilized by business, civil society, and government to increase the likelihood of business playing a constructive role in the conciliatory process. This book will be of enormous use not only to students and scholars but also to leaders in NGOs, government, and business.

Energy issues pose a challenge for efforts aimed at achieving sustainable development in that its use is necessary for economic and social development, yet it is also a major cause of environmental degradation, especially atmospheric pollution. Despite the growth in commercial energy use, two billion people remain without access to modern energy sources, and improving this situation is crucial to realising the Millennium Declaration goal of halving the number of people living in poverty by 2015. This publication contains a number of case studies

to illustrate best practice and lessons learned regarding sustainable energy use, including: energy market reform, energy efficiency, conventional and renewable energy technologies.
