Support your teaching of the Level 2 Health and Social Care: Core (Qualifications Wales) with this brand-new textbook developed in partnership with City & Guilds and WJEC. Be guided by our experts Anne-Marie Purse, Maria Ferreiro Peteiro and Vicky Tibbott to ensure your students have a solid foundation of knowledge and skills necessary to be successful. This accessible and course-specific textbook will cover the qualification's seven core units and will also prepare students for the externally marked MCQ exam and the internally marked scenario-based assessments. - Begin each unit with an explanation of Learning Outcomes and Assessment Criteria linked to the specification to guarantee the required course content is delivered - Introduce each topic in an accessible way with the short activities and topics for discussion - Invite students to reflect on their own experiences and to do further research to develop their understanding and skills - Contextualise their learning with case studies that explore real-life scenarios they may face, an utilise the subsequent questions to promote independent thinking - Check their understanding with short questions at the end of topics and encourage further reading a research with links to useful websites

Wound Management, First Edition, is the first volume in the Series that that follows the Curriculum Blueprint designed by the Wound Ostomy Continence Nurses Society (WOCN). Is the ideal resource for anyone seeking certification as a wound, ostomy or continence nurse, covering wounds caused by external mechanical factors and specific disease process, lower extremity ulcers, and the management of enterocutaneous fistulas and percutaneous tubes.

Since the first edition of this book was published there have been considerable changes in continuing care. NHS nursing homes have been created, enthusiasts have developed new initiatives, and attempts have been made to improve attitudes. The recent White Paper on Community Care is likely to accelerate the transfer of large numbers of elderly patients from long-stay hospital beds to private-sector accommodation: a move often accompanied by much anxiety about standards of care. Although Health Authorities visit private nursing homes and apply the National Association of Health Authorities' standards to them, anxieties continue. Unfortunately for the patients who remain in hospital, many Health Authorities seem reluctant to apply these same standards to their own long-stay departments, since many would fail abysmally. The 1987 annual report of the Health Advisory Service (see Chapter 3) presents a damning indictment of the care given to old people: A recent review of twelve consecutive HAS Reports on services for older people in hospitals shows that long-stay wards consistently offered environments which were unable to offer privacy, homely surroundings, personal space and possessions or adequate furniture. In the twelve districts there was not one comprehensive personalised clothing service. Half of the reports commented on the lack of effective management of continence. Catering was often provided according to the needs of the institution rather than those of the resident patients.

The book describes the current management of fecal incontinence from an advanced practice nursing perspective. It fills a gap in nursing knowledge promoting and showcasing the expertise and significant contribution of advanced practice nurses whose role is so important in the health care system. Authors' objectives are to disseminate information about evidenced-based nursing care for the incontinent patient to improve outcomes and quality of life as well as to instruct nurses involved in continence care to practice at a high quality level. The book is structured in chapters, starting by explaining fecal incontinence and its impact on quality of life. The second chapter discusses advanced practice continence nursing. The epidemiology of fecal incontinence is reviewed to provide an appreciation of the scope of the problem. Normal defecation and mechanisms to ensure continence are reviewed to improve understanding of the alterations resulting in fecal incontinence. The next chapters focus on assessment, diagnosis and management of fecal incontinence in various patient groups which parallels the delivery of care. Since surgery is a treatment option in some cases, a chapter explains surgical approaches and the postoperative nursing care. As skin damage is the most common complication of fecal incontinence there is a chapter about management of these associated problems. The last chapter addresses managing fecal incontinence in the patient with urinary continence also. Practice related chapters include a case study. All chapters highlight key information in a box or table. The intended readers are international advanced practice nurses who care for patients with incontinence as well as continence nurse specialists practicing at a general level. General nurses interested in continence care might also be interested in reading the book. Other disciplines who are part of the healthcare team may be interested in learning more about role of the advanced practice nurse.

Written by expert clinicians, Core Curriculum Wound Management, 2nd Edition is one of the few nursing texts to offer the basic pathology, physiology and current clinical skills required for high-level wound care. This is essential content for those seeking WOC certification, including nursing students in wound care programs; nurses involved in wound care; nurses in gastroenterology, urology, and surgical nursing; graduate nursing students and nursing faculty.

This book addresses the reality of delivering gynaecological care in the 21st century, and looks at the developments that are currently taking place in the field. It provides an overview of some common gynaecological problems and looks at new services and different ways of delivering care. It also shows how gynaecological services are developing in response to women's needs. Above all the book is not medically orientated but shows how nurses and professionals allied to medicine are making a difference. * Covers the latest developments in the gynaecological field * Written specifically from a nursing and allied health professionals perspective

This title is directed primarily towards health care professionals outside of the United States. The 3rd edition of this popular text covers all aspects of continence, focusing on continence promotion and measurement of outcomes. The core chapters follow a standard structure for ease of use, and case studies are used throughout to link theory to practice, contains the latest developments in continence treatment incorporates the most recent NHS guidelines on continence management and current legislation includes international perspectives provides a resource for practitioners caring for all client groups in the community and hospital environments a website providing practical documentation along with downloadable charts and examples of continuing professional development activities a new chapter on vulnerable groups, including the frail elderly, and mental health and neurological problems points for continuing professional development at end of every chapter research evidence to guide practice

An essential guide to critical care nursing that includes all the key scientific knowledge and procedures you will need to know when entering the critical care environment. Written by a dedicated team of lecturers and practitioners with extensive experience in critical care nursing, this textbook covers all the key elements involved in nursing critically ill adults, with individual chapters on managing problems associated with different organ systems and the pathophysiology behind these disorders. It also features coverage of psychological care and infection prevention, and includes a consistent focus on the importance of a person centred, evidence-based approach to critical care delivery. To further support your learning, the book is full of activities that enhance your knowledge and test your understanding, including clinical case studies, critical thinking tasks, and reflective practice exercises. For lecturers and instructors, there is a collection of online resources including a testbank of multiple-choice questions, links to relevant videos for each chapter, and PowerPoint slides for each chapter. The ideal textbook for nursing students studying critical care, undertaking clinical placements in intensive care, or nurses new to the critical care environment.

The fourth edition of the highly acclaimed Principles and Practice of Geriatric Medicine provides an account of the fundamental changes associated with ageing, which are essential to our understanding and management of the elderly sick population. The title has been extensively revised and updates to reflect the enormous changes in treatment options and medical conditions emerged since publication of the third edition. Written by worldwide experts of international repute, this is the most up-to-date and comprehensive single reference source currently available. Principles & Practice of Geriatric Medicine, Fourth Edition incorporates: More than 30 new chapters, including: Preventive geriatrics, Anorexia of Aging, Managements of Weight Loss, Dehydration, Vitamins and Minerals in the Elderly, Cancer and Aging, Mild Cognitive Impairment, Treatment of Behavioral Disorders, The Older Patient with Down's Syndrome, Drug Abuse in Older People, Breast Cancer, Women's health A truly global perspective, including new chapter on: Care of the elderly in Israel; old age in a young land, Geriatric Medicine in China, Geriatric medicine education in Europe, Geriatrics from the European Union Perspective, India, Day Hospitals, Perspectives from Latin America The title will be indispensable for all those involved in the treatment of older patients: Gerontologists to keep up-to-date with the latest developments in the field General practitioners and specialists in health policy and community care, who increasingly have to deal with a significant number of older people. Academic researchers in geriatric medicine, who are in need for an all encompassing reference work Medical registrars (UK) / residents (US) in order to pass their exams Teachers of Geriatric Medicine Hospital libraries with increasing budgets to spend on much needed resource in this growing field. Professionals within the pharmaceutical industry in order to monitor treatment options and new prescription developments.
