The Attacking Ocean is a history of people
dealing with the ever changing ocean.

From 15,000 years ago to today and from
the North Sea to Tuvalu and Bangladesh.

It is a history of how civil actions have
dealt with the encroaching sea over the
years. From rising tides after the last ice
age, to storm surges, floods and tsunamis.

Over the past fifteen thousand years the Earth has witnessed dramatic changes in sea level. The last Ice Age, when coastlines were more than 700 feet below modern levels, saw rapid global warming, and over the following ten millennia, the oceans climbed in fits and starts. These changes had little impact on the humans of the day, because the earth's population was then so small, and those few ...

A history of climate change describes the dramatic evolution and stabilization of the oceans before the rise of humans approximately 6,000 years ago, tracing a significant rise in global temperatures since 1860 and how a rising sea level is affecting world populations.

We know the tales of Columbus and Captain Cook, yet much earlier mariners made equally bold and world-changing voyages. In *Beyond the Blue Horizon*, archaeologist and historian Brian Fagan tackles his richest topic yet: the enduring quest to master the oceans, the planet's most mysterious terrain. From the moment when ancient Polynesians first dared to sail beyond the horizon, Fagan vividly explains how our mastery of the

Oceans changed the course of human history. What drove humans to risk their lives on open water? How did early sailors unlock the secrets of winds, tides, and the stars they steered by? What were the earliest ocean crossings like? With compelling detail, Fagan reveals how seafaring evolved so that the forbidding realms of the sea gods were transformed from barriers into a nexus of commerce and cultural exchange. From bamboo rafts in the Java Sea to triremes in the Aegean, from Norse longboats in the North Atlantic to sealskin kayaks in Alaska, Fagan crafts a captivating narrative of humanity's urge to challenge the unknown and seek out distant shores.

Repercussions. Lies, bullying, conspiracy theories, bigoted and racist rants, and calls for violence targeting the most vulnerable circulate openly on the web. And thanks to the guarantees of the First Amendment and the borderless nature of the Internet, governing bodies are largely helpless to control this massive assault on human dignity and safety. Abe Foxman and Christopher Wolf expose the threat that this unregulated flow of bigotry poses to the world. They explore how social media companies like Facebook and YouTube, as well as search engine giant Google, are struggling to reconcile the demands of business with freedom of speech and the disturbing threat posed by today's purveyors of hate. And they explain the best tools available to citizens, parents, educators, law enforcement officers, and policy makers to protect the twin values of transparency and

"A riveting, terrifying, thrilling story of a netherworld that few people know about, and fewer will ever see . . . The soul of this book is as wild as the ocean itself." --Susan Casey, best-selling author of *The Wave: In Pursuit of the Rogues, Freaks, and Giants of the Ocean* An adrenaline-fueled tour of a vast, lawless and rampantly criminal world that few have ever seen: the high seas. There are few remaining frontiers on our planet. But perhaps the wildest, and

least understood, are the world's oceans: too big to police, and under no clear international authority, these immense regions of treacherous water play host to rampant criminality and exploitation. Traffickers and smugglers, pirates and mercenaries, wreck thieves and repo men, vigilante conservationists and elusive poachers, seabound abortion providers, clandestine oil-dumpers, shackled slaves and cast-adrift stowaways -- drawing on five years of perilous and intrepid reporting, often hundreds of miles from shore, Ian Urbina introduces us to the inhabitants of this hidden world. Through their stories of astonishing courage and brutality, survival and tragedy, he uncovers a globe-spanning network of crime and exploitation that emanates from the fishing, oil and shipping industries, and on which the world's economies rely. Both a gripping adventure story and a stunning

Dive deep into the vivid underwater world of Dark Life! The oceans rose, swallowing the lowlands. Earthquakes shattered the continents, toppling entire regions into the rising water. Now, humans live packed into stack cities. The only ones with any space of their own are those who live on the ocean floor: the Dark Life. Ty has spent his whole life living deep undersea. When outlaws attack his homestead, he finds himself in a fight to save the only home he has ever known. Joined by Gemma, a girl from Topside, Ty ventures into the frontier's rough underworld and discovers some dark secrets to Dark Life. Secrets that threaten to destroy everything.

"A Pulitzer Prize-winning reporter chronicles the 12 days leading up to the Japanese attack on Pearl Harbor, examining the miscommunications, clues, missteps and racist assumptions that may have been behind America's failure to safeguard against the tragedy,"--NoveList.

Animals, and our ever-changing relationship with them, have left an indelible mark on human history. Through an in-depth analysis of six truly transformative human-animal relationships, Fagan shows how our habits and our very way of life were considerably and irreversibly altered by our intimate bond with animals. Among other stories, Fagan explores how herding changed human behavior; how the humble donkey

This century has seen the costliest hurricanes in U.S. history—but who bears the brunt of these monster storms?

Consider this: Five of the most expensive hurricanes in history have made landfall since 2005: Katrina (\$160 billion), Ike (\$40 billion), Sandy (\$72 billion), Harvey (\$125 billion), and Maria (\$90 billion). With more property than ever in harm ' s way, and the planet and oceans warming dangerously, it won ' t be long before we see a \$250 billion hurricane. Why?

Because Americans have built \$3 trillion worth of property in some of the riskiest places on earth: barrier islands and coastal floodplains. And they have been encouraged to do so by what Gilbert M.

Gaul reveals in *The Geography of Risk* to be a confounding array of federal subsidies, tax breaks, low-interest loans, grants, and government flood insurance that shift the risk of life at the beach from private investors to public taxpayers, radically distorting common notions of risk. These federal incentives, Gaul argues, have resulted in one of the worst planning failures in American history, and the costs to taxpayers are reaching unsustainable levels. We have become responsible for a shocking array of coastal amenities: new roads, bridges, buildings, streetlights, tennis courts, marinas, gazebos, and even spoiled food after hurricanes. *The Geography of Risk* will forever change the way you think about the coasts, from the clash between economic interests and nature, to the heated politics of regulators and developers.
