The cremation furnaces of Auschwitz, fired by means of coke-fed gasifiers, constituted a development – or rather a simplification – of the civilian types; however (as I found out in the early stages of my work) it is difficult to locate detailed information on these furnaces even in the specialized literature.

Crematorium I Crematorium I operated [at Auschwitz] from August 15, 1940 until July 1943. According to calculations by the German authorities, 340 corpses could be burned every 24 hours after the installation of the three furnaces. The largest room in this building was designated as a morgue.

used to calculate incineration times (page 181). The
two smaller crematoria (Nos. IV and V) had --
according to the book -- 16 cremators and could
dispose of 3000 corpses daily.

The Problem of Cremator Hours and Incineration Time

It takes hours to burn one body in a civilian
crematorium. How could the ovens at Auschwitz-
Birkenau cremate nearly 900,000 victims in a two-year
period? At Auschwitz-Birkenau, the ovens operated
continuously, burning multiple bodies at once. We
cannot compare that to the cremation process in civilian
crematoria.
