The Geology of Central Europe Volume 2: Mesozoic and ...

The geology of Europe is varied and complex, and gives rise to the wide variety of landscapes found across the continent, from the Scottish Highlands to the rolling plains of Hungary. Europe's most significant feature is the dichotomy between highland and mountainous Southern Europe and a vast, partially underwater, northern plain ranging from England in the west to the Ural Mountains in the east. These two halves are separated by the Pyrenees and the Alps-Carpathians mountain chain. The northern

Geology of Europe - Wikipedia

Central European Geology Acta Geologica Hungarica The journal covers all fields of geology, including mineralogy, petrography, geochemistry, paleontology, stratigraphy, sedimentology, tectonics, regional geology and applied geology with special regard to Central Europe.

Central European Geology | AKJournals

Simplified map of the surface geology of Germany. The Central European Depression (Mitteleuropäische Senke) (light yellow) is almost completely covered by Quaternary deposits (Quartär). The Central European Blocks area appears mainly in violet (Mesozoic + Zechstein + Ruhr Carboniferous (Silesian)) and brown (before late Carboniferous). In the far south are the Alps.

Geology of Germany - Wikipedia

The Massif Central is one of the two large basement massifs in France, the other being the Armorican Massif. The Massif Central's geological evolution started in the late Neoproterozoic and continues to this day. It has been shaped mainly by the Caledonian orogeny and the Variscan orogeny. The Alpine orogeny has also left its imprints, probably causing the important Cenozoic volcanism. The Massif Central has a very long geological history, underlined by zircon ages dating back into the Archaean
