Time Management for System Administrators by Limoncelli ...

Fortunately, system administrators can be very adept at dealing with challenges. A good time management system is based on the principles of using one system, conserving brain power, and using routines. In order for the system to be effective, policies must be in place to support it. The three key policy points are defining the official ways for users to get help, the scope of the work supported, and what constitutes an emergency. The system administrator has two basic tools for managing ...

Time Management for System Administrators | USENIX

Time Management for System Administrators is exactly this type of book, peculiar for the focus on applying time management to a specific role in IT with the right amount of fun and analytic approach. It was written a few years ago, but 99% of the content is still applicable and relevant today. Systems Administrator are a very strange role in IT, very hard to describe and most of the time an easy target for being accountable of the whole infrastructure and for every decision they may or may ...

Time Management for System Administrators | USENIX

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so. To meet these needs, a system administrator may acquire, install, or upgrade computer components and softwar
