When directly generated and affected by local waters, a wind wave system is called a wind sea (or wind waves).

Wind waves will travel in a great circle route after being generated – curving slightly left in the southern

hemisphere and slightly right in the northern hemisphere. After moving out of the area of fetch, wind waves are called swells and can travel thousands of miles. A noteworthy example of this are waves generated south of Tasmania

The short waves
are divided into:

Wind waves, also
called storm
waves, or sea.

These are waves
generated and
influenced by the
local wind field.

Wind waves are
normally relatively
steep (high and
