Among the highlights of this book are the use of nanotechnology to increase potency of available insecticides, the use of genetic engineering techniques for controlling insect pests, the development of novel insecticides that bind to unique biochemical receptors, the exploration of natural products as a source for environmentally acceptable insecticides, and the use of insect genomics and cell lines for determining biological and biochemical modes of action of new insecticides.

This book focuses on the crucial sustainability challenge of reducing food waste at the level of consumer-society. Providing an in-depth, research-based overview of the multifaceted problem, it considers environmental, economic, social and ethical factors. Perspectives included in the book address households, consumers, and organizations, and their role in reducing food waste. Rather than focusing upon the reasons for food waste itself, the chapters develop research-based solutions for the problem, providing a much-needed solution-orientated approach that takes multiple perspectives into account. Chapters 1, 2, 12 and 16 of this book are available open access under a CC BY 4.0 license at link.springer.com

This book provides an overview of the latest advances concerning symbiotic relationships between plants and microbes, and their applications in plant productivity and agricultural sustainability. Symbiosis is a living phenomenon including dynamic variations in the genome, metabolism and signaling network, and adopting a multidirectional perspective on their interactions is required when studying symbiotic organisms. Although various plant-microbe symbiotic systems are covered in this book, it especially focuses on arbuscular mycorrhiza (AM) symbiosis and root nodule symbiosis, the two most prevalent systems. AM symbiosis involves the most extensive interaction between plants and microbes, in the context of phylogeny and ecology. As more than 90% of all known species of plants have the potential to form mycorrhizal associations, the productivity and species composition, as well as the diversity of natural ecosystems, are frequently dependent upon the presence and activity of mycorrhizas. In turn, root nodule symbiosis includes morphogenesis and is formed by communication between plants and nitrogen-fixing bacteria. The biotechnological application of plant-microbe symbiosis is expected to foster the production of agricultural and horticultural products while maintaining ecologically and economically sustainable production systems. Designed as a hands-on guide, this book offers an essential resource for researchers and students in the areas of agri-biotechnology, soil biology and fungal biology.

Radha has an imaginary Friend-in-Mind. Salman Khan. Err, yes. THE Salman Khan. THE Superstar Salman Khan. If Calvin can have an imaginary playmate Hobbes, what's stopping Radha from having Salman Khan as her imaginary Friend-in-Mind? So what if he's the heartthrob of millions? So what if he's beyond her wildest reach despite living in Mumbai? So Radha leads her ordinary life, sharing her journey with her Friend-in-Mind Salman, through 20 years of a break-up bhari Zindagani. Life becomes very filmy for Radha, when she falls in love with the Friendly Neighborhood RJ. Yes, if she can have Salman Khan as her imaginary friend, she could do something equally filmy, such as falling in love with the voice of a RJ. Will Mr. RJ reciprocate? He's reluctant, what else? But Radha has already found his favour. Unwittingly, being his favorite listener, Radha has now won a contest, and the prize is... A Date with Salman Khan. Oops! Now what?

An accessible software package which allows individuals to develop models on the impact of climate in both plants and animals. CLIMEX is used in over 20 countries to examine the distribution of insects, plants, pathogens and vertebrates for a variety of purposes, including biogeography in quarantine, biological control strategies and impacts of changes in climate and climate variability. It can be used to compare climate at different locations, compare climate across a number of years and to match climates against pre-set criteria.

Twenty years after the end of apartheid rule, the claim that democratic South Africa is founded on the 'spirit of law' (nomos) of our shared humanity is questionable, to say the least. Some would argue that all talk of Ubuntu (or African humanism) should be dismissed as a passing fad of an exhausted nationalism. But, a different response to the present is possible; one that proceeds from a temporary suspension (epoche) of the nationalist matrix, and all the dead-end questions that have resulted from it, in order to reposition Ubuntu in the more cosmopolitan terms of a critical humanism that must always remain irreducible to the politics of the day. As discussed in this book, this is a project that has to return to, in order to retrace, the founding claim that a politics premised on our shared humanity is, after all, perhaps possible.
